**Demographic Portrait  
Archdiocese of Milwaukee**

**Executive Summary**

In Summer 2014 the Archdiocese of Milwaukee commissioned the Center for Applied Research in the Apostolate (CARA) to produce a demographic analysis of its Catholic population. This report combines information from the Archdiocese with county level U.S. Census data for the total population, as well as CARA's databases of diocesan and county level historical information on the Catholic population. Based on the Wisconsin State Data Center's projections of the total population in the 10 counties of the Archdiocese of Milwaukee, CARA created projections of the Catholic population living within the boundaries of the Archdiocese of Milwaukee through 2040. Analysis includes detailed data on the historical and current characteristics of the Catholic and total population living in the Archdiocese of Milwaukee. Additional tables provide parish-level data on the number of registered Catholics, parish capacity and attendance, Baptisms, and levels of parish staffing among other factors.

**Major Findings**

The Archdiocese of Milwaukee includes a total population (Catholic and non-Catholic) of about 2,341,000 people. There are an estimated 592,000 parish-affiliated Catholics in the Archdiocese of Milwaukee, constituting about 25 percent of the total population. Although the Archdiocese is expected to see an increase in its population (both Catholic and non-Catholic), some areas will grow faster than others, and a couple of counties will see little or no change in their population size.

From 1970 through 2007, the parish-affiliated Catholic population in the Archdiocese of Milwaukee had been steady at about 680,000. However, since 2007 this

population has declined by 13 percent to about 592,000. The total number of self-identified Catholics has continued to grow slowly to about 735,000. Thus, about 19 percent of the self-identified Catholic population (approximately 143,000 individuals) are baptized and continue to self-identify as Catholics although they have no parish affiliation and either infrequently or never attend Mass anymore.

Alongside these changes the Archdiocese has experienced a decline in the number of priests engaged in active ministry. There were 429 fewer active Archdiocesan priests in 2013 than in 1970 (i.e., a decline of 73 percent). These forces have combined to increase the ratio of parish-affiliated Catholics per priest in recent years. Utilizing historic data over time from *The Official Catholic Directory* and a 2014 CARA priest projection completed for the Archdiocese, this report highlights the challenges of reduced priest personnel staffing and diminishing numbers of parish-affiliated Catholics.

Characteristics of the total population in the Archdiocese come from the 2010 Decennial Census of the United States and the most recent waves of the American Community Survey (ACS). Historical total population data come from historical censuses. This report also utilizes estimates and projections produced by the Wisconsin State Data Center. Characteristics of the total (Catholic and non-Catholic) population, such as age structure, household income, and poverty levels, vary between and within counties, as illustrated in this report. Below are selected major findings from this demographic portrait of the Archdiocese of Milwaukee:

#### *Diocesan Trends and Projections*

- After two decades of relative stability, in 1990, the total population in the Archdiocese of Milwaukee began to grow at a relatively constant rate. The parish-affiliated Catholic population remained relatively stable from 1970 to 2007 when it then began to noticeably and consistently decline year-over-year. In the decade prior to that decline, parish-affiliated Catholic represented about 31 percent of the population. In 2013 parish affiliated Catholics make up only 25 percent of the total population of the Archdiocese.
- The number of active diocesan priests has declined by 73 percent since 1970, from 587 to 159 in 2013. Priest projections produced by CARA for the Archdiocese of Milwaukee anticipate continued but slower declines in the future, resulting in 106 active diocesan priests by 2040.
- In 2013, there were 3,673 parish-affiliated Catholics per active diocesan priest in the Archdiocese of Milwaukee. This ratio is slightly below the national average and is expected to remain so in the future. By 2040, the Archdiocese of Milwaukee will likely have approximately 2,742 parish-affiliated Catholics per active diocesan priest. The number of self-identified Catholics who are *not* affiliated with a parish are expected to continue to grow and with declining numbers of priests there will be approximately 7,751 self-identified Catholics (both parish affiliated and unaffiliated) per active diocesan priest in 2040.

- Although the number of active diocesan priests in the Archdiocese has decreased, the number of parishes has remained above 200; there are now more parishes than active diocesan priests.
- If the parishes are merged or closed at the current pace, by 2040 there are projected to be 1.4 parishes for each active diocesan priest. Currently there are 1.3 parishes per active diocesan priest. Nationally, there is 1.0 parish per active diocesan priest in the United States.
- In 2013, there were 2,930 parish-affiliated Catholics per parish in the Archdiocese of Milwaukee. Nationally, there is an average of 3,809 parish-affiliated Catholics per parish across the United States, 30 percent more than in the Archdiocese of Milwaukee.

#### *Catholic Population Characteristics*

- In 2010, more than a third of parish-affiliated Catholics (36 percent, or about 199,000) in the Archdiocese of Milwaukee lived in Milwaukee County.
- A majority of parish-affiliated Catholics, 54 percent, resided in Milwaukee County in 1970. However, between 1970 and 2010 the parish-affiliated Catholic population in Milwaukee County declined by 47 percent from 377,600 to 199,000.
- The county gaining the largest numbers of parish-affiliated Catholics between 1970 and 2010 was Waukesha County. Here the population increased by 30 percent from 88,300 in 1970 to 115,000 in 2010. More than one in five of the Archdiocese's parish-affiliated Catholics (21 percent) now resides in this county.

#### *Total Population (Catholic and non-Catholic) Characteristics*

- Between the 2000 and 2013, the total population (Catholic and non-Catholic) in the Archdiocese of Milwaukee grew by 5 percent, while the size of the Hispanic population grew by 70 percent.
- In terms of percentage change, Washington County experienced the fastest growth (+13 percent); however, the largest numeric gains occurred in Waukesha County (+330,000 people).
- The total population in the Archdiocese is expected to continue to grow. The population is expected to grow by 268,000 people between 2013 and 2014 (+11.5 percent). This growth will occur for the most part through natural increase with births outnumbering deaths rather than by migration.
- Residents of the Archdiocese are most likely to self-identify their race and ethnicity as non-Hispanic white (72 percent). The second largest race and

ethnicity group in the Archdiocese is black or African American (13 percent). Across counties, residents of Milwaukee County are least likely to self-identify as non-Hispanic white (65.6 percent) and most likely to self-identify as black or African American (27.1 percent).

- The Archdiocese of Milwaukee has 60 dependents per 100 people in the working age population. Of these 38 are youth (under age 18) and 22 are seniors (65 or older). This number of dependents is nearly identical to the United States as a whole and dependency ratios across counties in the Archdiocese do not vary in large numbers. Ozaukee County has the highest percentage of seniors in the population (17 percent) and Milwaukee and Kenosha counties have the highest percentage of youth (25 percent).
- The Archdiocese of Milwaukee has a higher rate of home-ownership than the United States as a whole: 77 percent of occupied homes are the residence of an owner compared to 66 percent in the United States overall.
- Owner-occupied homes in Waukesha and Ozaukee counties have the highest median values (\$257,700 and \$255,600, respectively) and those in Fond du Lac County have the lowest median value (\$145,800).
- Residents in Waukesha and Ozaukee counties have the highest median household incomes (\$75,689 and \$75,854, respectively) and those in Milwaukee County have the lowest median household incomes (\$43,599).
- One in ten people in the Archdiocese of Milwaukee live in poverty; this rate is lower than the poverty rate for the United States overall (14.9 percent).

### *Parish Characteristics*

- Parishes in the Archdiocese of Milwaukee report 146,974 Mass attenders per weekend. With a weekend capacity (seats multiplied by Masses) of 428,301 this means that 34 percent of the Archdiocese's capacity is used on a typical weekend.
- Mass attenders represents 34 percent of registered parishioners reported by parishes and 25 percent of the parish-affiliated Catholic population. This also represents 20 percent of the self-identified Catholic population of the Archdiocese of Milwaukee. This level of Mass attendance on a typical weekend is similar to CARA's national estimates of Mass attendance. Thus, for its population the Archdiocese has relatively average levels of Mass attendance.

**Demographic Portrait  
Archdiocese of Milwaukee**

**Introduction**

Established on November 8, 1843, the Archdiocese of Milwaukee covers 4,758 square miles and includes the 10 counties in the southeast corner of Wisconsin.

The Archdiocese of Milwaukee has several adjacent neighbors, including three other Wisconsin Archdioceses that belong to the Province of Milwaukee. The Diocese of Madison borders it to the west, while the Diocese of Green Bay lies to its north. Outside of Wisconsin, the Archdiocese of Chicago and the Diocese of Rockford in Illinois lie to the south.

The Archdiocese serves approximately 592,000 parish-affiliated Catholics living in 10 counties.<sup>1</sup> Map 1 on the following page illustrates the geographic dimensions of the Archdiocese of Milwaukee. The 10 counties are displayed, and the cities and towns with Catholic parishes have been mapped. Milwaukee County contains the largest concentration of parishes and 50 parishes (25 percent) are within the City of Milwaukee.

---

<sup>1</sup> The self-identified Catholic population percentage for the state of Wisconsin is 31.5 percent according to the most recent estimates of Gallup. Applying this to the Archdiocese alone we estimate that there may be as many as 737,000 self-identified Catholics in the Archdiocese of Milwaukee. Approximately 147,000 Catholics in the Archdiocese consider themselves to be Catholic but are not registered with a parish or regularly attending Mass. Approximately 592,000 Catholics are known to the Archdiocese through an affiliation with a parish.

## Historical Trends and Projections

### *Diocesan Catholic Population and Priests*

Figure 1 shows the size of the parish-affiliated Catholic population in the Archdiocese of Milwaukee from 1970 through 2013. According to *The Official Catholic Directory*, in 1970 there were just over 686,000 parish-affiliated Catholics in the Archdiocese. This population remained fairly steady from 1970 to 2009 averaging about 680,000 with a low of 613,744 in 1995 and a peak of 731,516 in 2003. Since 2009, the Archdiocese has reported a declining population annually in *The Official Catholic Directory*. The average annual rate of change for the parish-affiliated Catholic population since 2009 has been -2.6 percent.

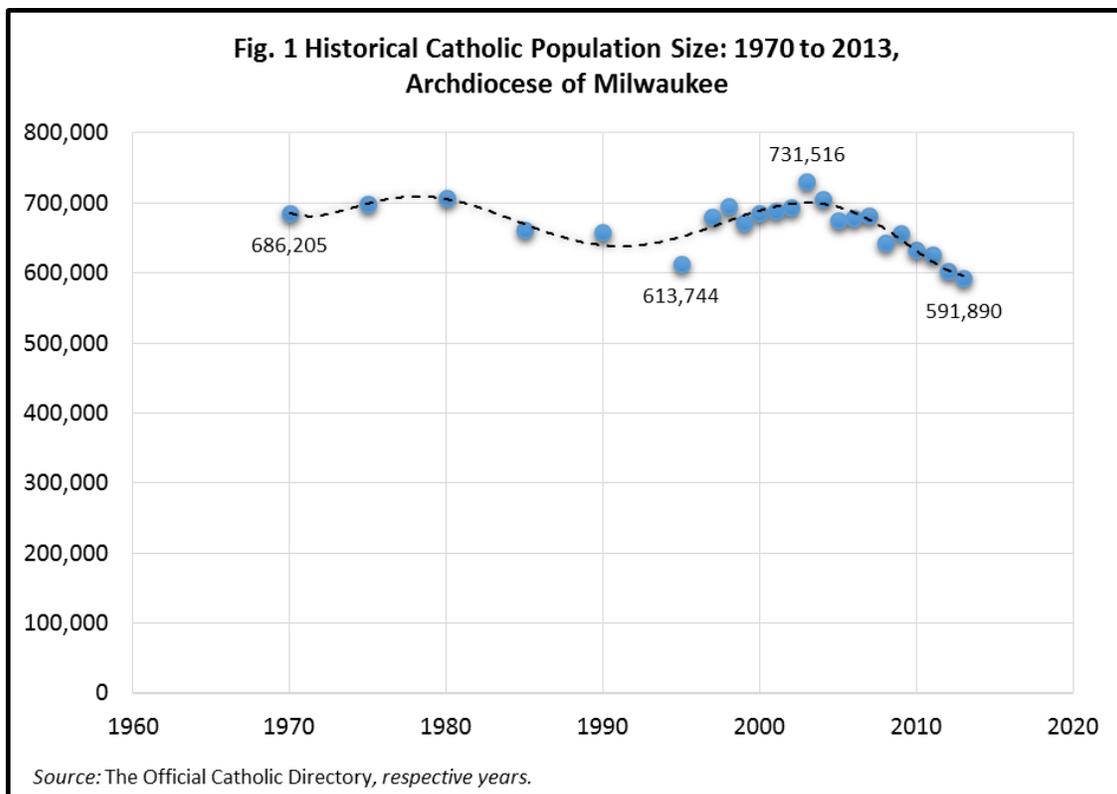

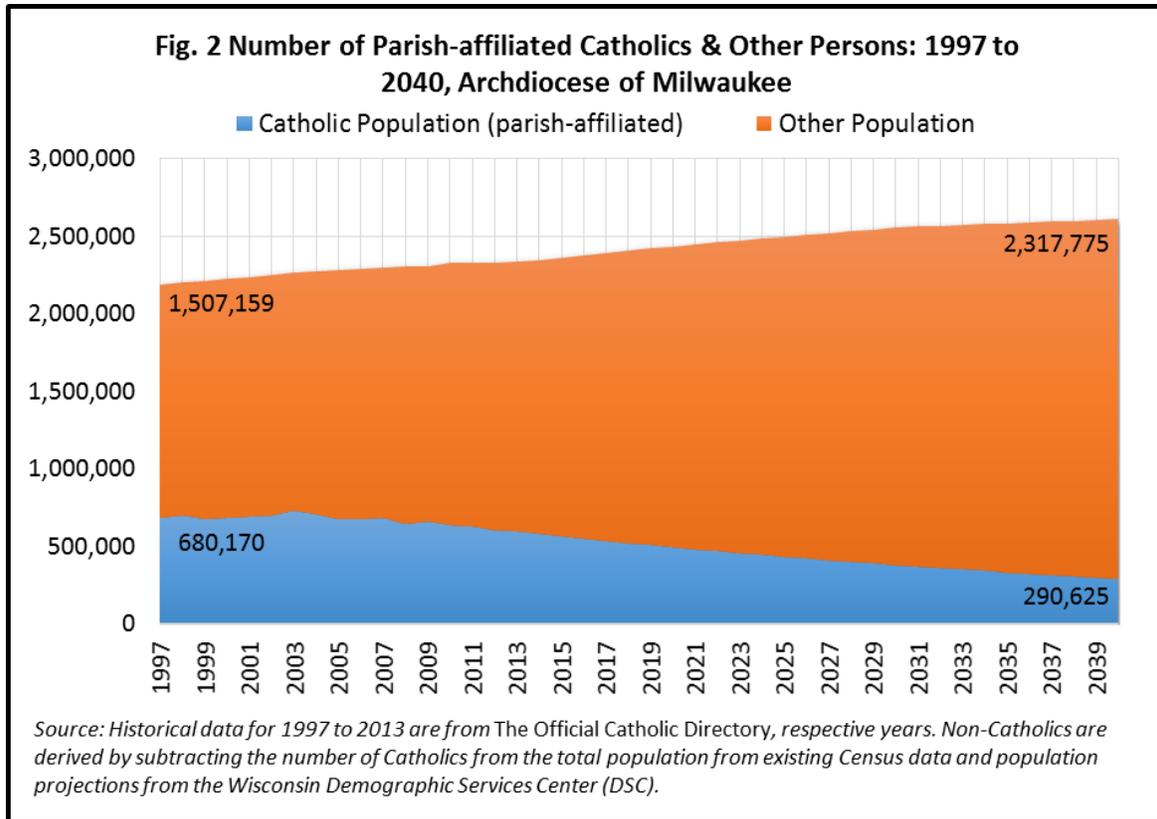

Figure 2 on the following page shows the size of the parish-affiliated Catholic population as well as others living the Archdiocese since 1997 and projected forward through 2040. In 1997, there were 2,187,329 people (parish-affiliated Catholics and others) living in the Archdiocese, with parish-affiliated Catholics making up about 31 percent of the total population. By 2013, the size of the total population had grown to 2,332,118 people, and the proportion of Catholic and parish-affiliated had declined to about 25 percent. The Archdiocese has not estimated its parish-affiliated Catholic population to be more than 30 percent of the total population since 2004. If the current annual rate of decline in the parish-affiliated Catholic population (-2.6 percent) continues, by 2040 this sub-group of the population would make up 11 percent of the total

population in the Archdiocese and number about 290,600. The Wisconsin Demographic Services Center (DSC) estimates that the total population of the counties in the Archdiocese will grow from 2,346,653 in 2014 to 2,608,400 by 2040 (+11.2 percent adding 261,747 residents).

The self-identified Catholic population—including those known to the Archdiocese through an affiliation with a parish and those who are not affiliated—will likely continue to *grow* in the Archdiocese. Gallup surveys estimate that about 31 percent of the Wisconsin state population self-identifies their religion as Catholic. This estimate is similar to the percentage of residents in the Archdiocese that are parish affiliated prior to 2008. As shown in Figure 3 on the following page, if *self-identified* Catholics continue to be approximately 31 percent of the population there will be 766,000 Catholics in the Archdiocese in 2020 and this would be expected to grow to 805,000 in 2030 and 821,000 in 2040. The percentage of self-identified Catholics who are also affiliated with a parish is expected to decline from 78 percent in 2014 to 35 percent in 2040.

The shift away from parish affiliation is part of a broader set of social changes in American culture. As Robert Putnam documented in *Bowling Alone: The Collapse and Revival of American Community* (2000) fewer and fewer Americans are maintaining or joining brick-and-mortar membership organizations. This erosion began in the late 1950s with more and more time being consumed by watching television and has advanced further since the late-1990s with the use of digital and internet-connected devices. Specifically, in CARA surveys fewer and fewer Catholics say they are registering with a parish and many choose to attend Mass infrequently and at a parish that is not closest to

their home. This makes it more and more difficult for dioceses to know how many Catholics are in their boundaries.<sup>2</sup>

On average, the self-identified Catholic population of states in Gallup’s aggregated annual surveys is 51% larger than *The Official Catholic Directory* estimates.<sup>3</sup> Although nationally the Church has estimated slightly fewer parish-affiliated Catholics in recent years in *The Official Catholic Directory*, the percentage of the U.S. adult population self-identifying as Catholic has remained unchanged. Midwestern and Northeastern dioceses have experienced real declines in the numbers of self-identified Catholics; however this is most often related to migration and population loss. With the Archdiocese of Milwaukee’s population expected to experience continued growth, it is likely that the number of self-identified Catholics will also increase—even as the numbers affiliated with a parish and regularly attending Mass may decline.<sup>4</sup>

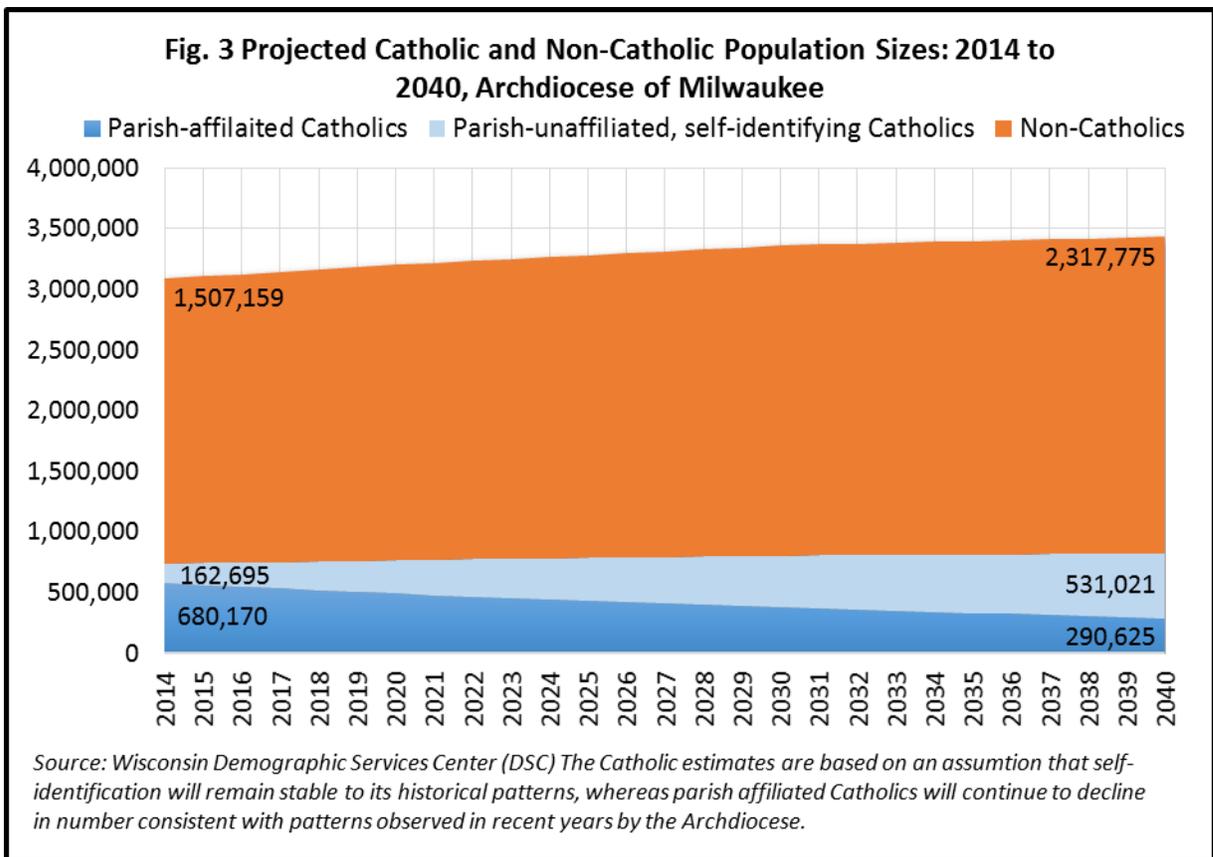

Table 1 on the next page shows the number of active archdiocesan priests from 1970 to 2013, and projected forward to 2040. With declining numbers of active diocesan priests in the United States and in many places of the world, the average number of

<sup>2</sup> More precise estimates would require a random-sample survey of residents asking their religious affiliation.

<sup>3</sup> For more see “The ‘Undercounted’” on CARA’s research blog: <http://nineteensixty-four.blogspot.com/2014/03/the-uncounted-11-million.html>

<sup>4</sup> However, CARA surveys estimate that approximately two-thirds of self-identified Catholics attend Mass at Christmas and Easter and 45 percent receive ashes on Ash Wednesday.

Catholics per active diocesan priest has increased. The Archdiocese of Milwaukee has seen its number of active archdiocesan priests decline from a high of 587 in 1970 to 177 in 2013. Based on the middle series priest projection that CARA created for the Archdiocese of Milwaukee in 2014<sup>5</sup>, the number of active archdiocesan priests will continue to fall, to 134 by 2020, and to 105 in 2030. From this point forward a more stable number of priests is expected to be available.

**Table 1. Catholic Population and Active Diocesan Priests, 1970 to 2040, Archdiocese of Milwaukee**

	<b>Parish-affiliated Catholics</b>	<b>Total Population</b>	<b>Percent Catholic and parish-affiliated</b>	<b>Active Archdiocesan Priests</b>	<b>Parish-affiliated Catholics per Priest</b>
1970	686,205	2,006,314	34%	587	1,169
1980	707,033	2,029,759	35%	507	1,395
1990	658,877	2,080,883	32%	374	1,762
2000	685,004	2,227,014	31%	255	2,429
2010	633,739	2,325,869	27%	179	3,706
2013	591,890	2,332,118	25%	159	3,344
<b>Projected data</b>					
2020	492,214	2,433,865	20%	134	3,673
2030	378,219	2,556,120	15%	105	3,602
2040	290,625	2,608,400	11%	106	2,742

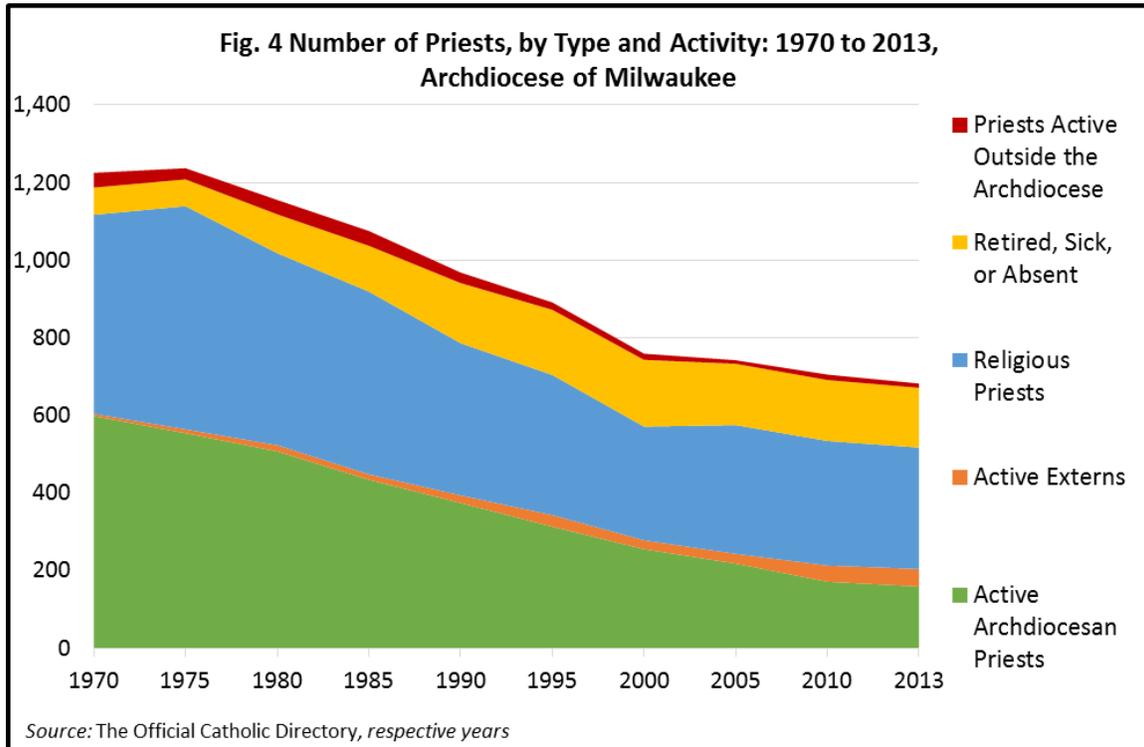

*Source: Historical data are from The Official Catholic Directory and represent active archdiocesan priests present in the Archdiocese. The number of active archdiocesan priests available in the future are based on A Projection of Priests for the Archdiocese of Milwaukee, Wisconsin (projection #10), created by CARA in 2014.*

Many priests may continue to serve as senior priests during their retirement, thus elevating the numbers of priests who are available for various sacramental celebrations, but the downward trend in the number of active archdiocesan priests will continue unless there is a large increase in seminary enrollments, which is not anticipated.<sup>6</sup> Figure 4 and Table 2 on the next page present these data on the number of priests currently available for active ministry in the Archdiocese in their historical context. Figure 4 displays the number of priests, by type and activity, in the Archdiocese of Milwaukee from 1970 through 2013. In addition to an obvious downward trend in the total number of priests, the number of priests who are retired, sick, or absent, (the golden yellow bar in this figure) has grown over time. Table 2 shows the detailed data underlying Figure 3. The number of active archdiocesan priests has declined by nearly three-quarters over the past 43 years and CARA's projections anticipate more declines in coming years, as an aging

<sup>5</sup> See *A Projection of Priests for the Archdiocese of Milwaukee, Wisconsin* created by CARA in 2014. Projection number 10 (medium estimate) was used in this report, which assumes the number of priests ordained each year is 3.5, that the retirement age of priests in the Archdiocese is 68 and that reduced priestly service will continue four years after retirement age.

<sup>6</sup> Numbers of priests available may also vary given the use of international priests.

priesthood results in the retirement or death of many priests in the Archdiocese. The number of religious priests in the Archdiocese of Milwaukee has also experienced declines, from a high of 575 in 1975 to the present low of 313. Barring a sudden change in the number of professed or ordained religious priests, this decline is expected to continue in the future. Although religious priests are not incardinated in an Archdiocese, they often serve through an agreement with the bishop in active ministry in a parish. Nationally, about one-third of religious priests are active in parish ministry.

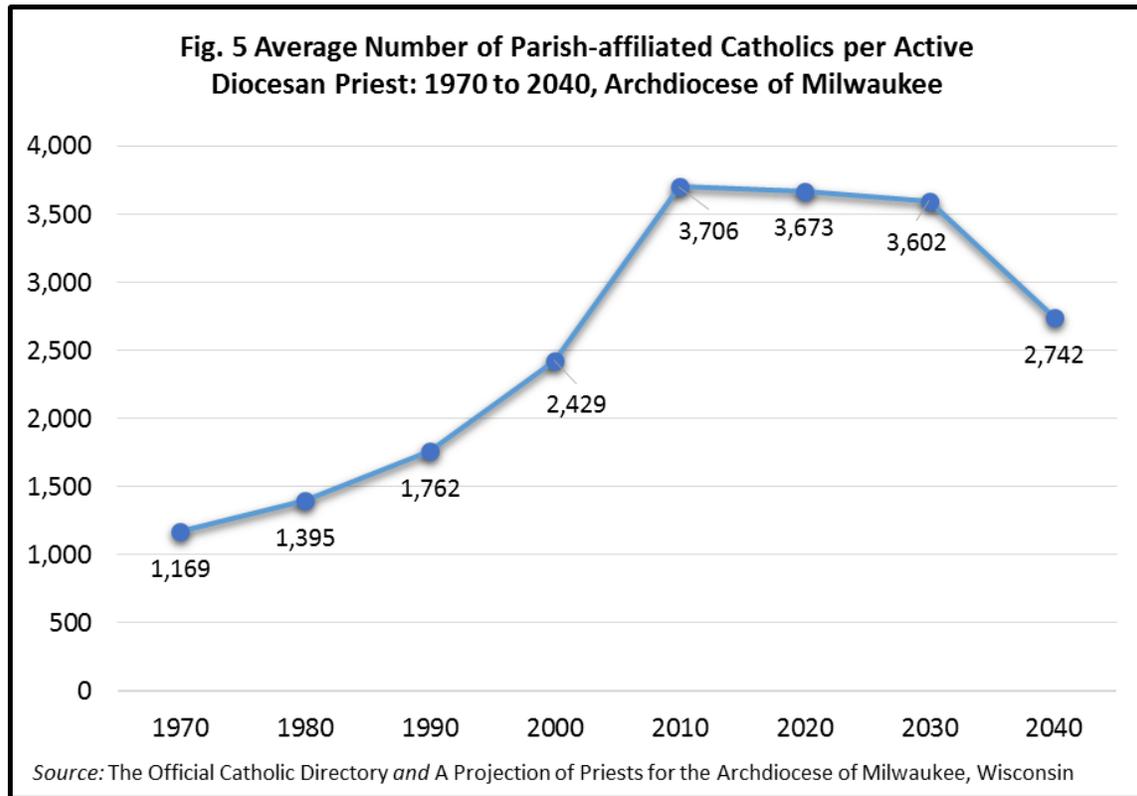

**Table 2. Number and Type of Priests: 1970 to 2013, Archdiocese of Milwaukee**

	<b>Active Archdiocesan Priests</b>	<b>Active Externs</b>	<b>Religious Priests</b>	<b>Retired, Sick, or Absent</b>	<b>Priests Active Outside the Archdiocese</b>
1970	598	6	513	70	38
1975	554	10	575	69	29
1980	507	16	495	100	37
1985	434	14	471	118	38
1990	374	20	392	155	27
1995	313	30	361	168	19
2000	255	23	293	172	16
2005	218	25	332	158	9
2010	171	42	321	157	14
2013	159	45	313	154	11

*Source: The Official Catholic Directory, respective years*

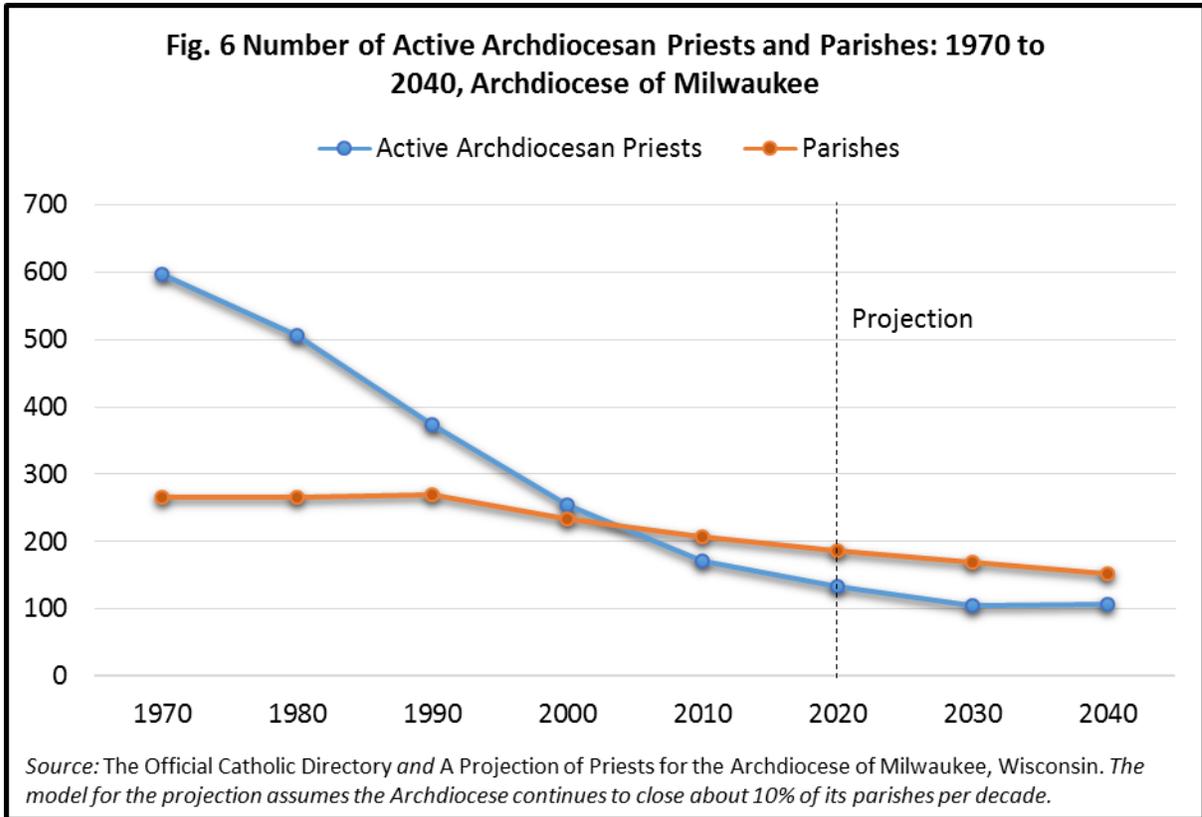

As shown in Figure 5, after rising for many decades there will be a relatively steady ratio of parish-affiliated Catholics per priest in the near future. After 2030, this ratio will even begin to fall. However, with the number of self-identified Catholics, unaffiliated with a parish, are expected to continue to grow in the coming decades. This will result in the ratio of all self-identified Catholics, regardless of parish affiliation, to likely increase from 5,721 in 2020, 7,668 in 2030, and 7,751 in 2040.

Nationally, with 66.6 million parish-affiliated Catholics and 17,860 active diocesan priests, there are about 3,700 of these Catholics per active diocesan priest. The number of self-identified Catholics in the United States is larger at 76.7 million. There are currently 4,295 self-identified Catholics per active diocesan priest. The Archdiocese of Milwaukee is currently similar to the country as a whole in terms of these ratios.

### ***Catholics, Priests, and Parishes***

Figure 6 and Table 3 on the following pages display the number of active diocesan priests and parishes in the Archdiocese of Milwaukee from 1970 to 2010, as reported by the Archdiocese and published in *The Official Catholic Directory*. As the number of active diocesan priests has decreased so too has the number of parishes. Since 1990 the Archdiocese has closed about 10 percent of its parishes per decade. Assuming this continues the Archdiocese would have 153 parishes in 2040. In 1970, there were 265 parishes in the Archdiocese of Milwaukee. Since then, the number of parishes declined to the current 202 parishes. Even with fewer parishes, the steeper decline in active archdiocesan priests will result in there being more parishes than these priests.

Nationally, there are nearly 17,500 parishes. Combined with the more than 17,800 active diocesan priests, there is approximately a one-to-one ratio of priests per parish across the United States. The number of active diocesan priests per parish in the Archdiocese of Milwaukee is currently below this national average and, with the projected declines in the number of active diocesan priests, will continue to fall below the national average over time. Continuing to merge or close parishes across the Archdiocese will ameliorate this declining ratio, but the needs of a growing self-identified Catholic population may also need to be balanced.

Table 3 on the following page shows the underlying data for Figure 6 on the number of parishes in the Archdiocese, along with the number of parish-affiliated Catholics, and active diocesan priests. The ratio of the average number of priests per parish highlights a trend that is not uncommon with a declining number of priests. As noted above, the ratio of priests per parish has been below 1.0 since 2010 and currently stands at 0.8 priests per parish. If the number of parishes continue to decline at the current pace, by 2020 there are projected to be 0.7 priests per parish, and by 2030 this ratio will fall further to 0.6.

**Table 3. Catholic Population, Active Diocesan Priests, and Parishes, 1970 to 2040, Archdiocese of Milwaukee**

	<b>Parish-affiliated Catholics</b>	<b>Active Archdiocesan Priests</b>	<b>Parishes</b>	<b>Parish-Affiliated Catholics per parish</b>	<b>Active Diocesan Priests per Parish</b>
1970	686,205	598	265	2,589	2.3
1980	707,033	507	266	2,658	1.9
1990	658,877	374	269	2,449	1.4
2000	685,004	255	234	2,927	1.1
2010	633,739	171	210	3,018	0.8
2013	591,890	159	202	2,930	0.8
<b>Projected data</b>					
2020	492,214	134	189	2,604	0.7
2030	378,219	105	170	2,225	0.6
2040	290,625	106	153	1,900	0.7

*Source: Historical data are from The Official Catholic Directory and represent active archdiocesan priests present in the Archdiocese. The number of active archdiocesan priests available in the future are based on A Projection of Priests for the Archdiocese of Milwaukee, Wisconsin (projection #10), created by CARA in 2014.*

Table 3 also shows the average number of parish-affiliated Catholics per parish in the Archdiocese of Milwaukee. In 2013, there were 2,930 Catholics per parish in the Archdiocese; nationally this ratio is higher. With 66.6 million U.S. Catholics and 17,483 parishes, there is an average of about 3,809 Catholics per parish across the United States. As noted previously the number of self-identified Catholics unaffiliated with a parish is expected to grow in the future. The ratio of total Catholics, regardless of parish affiliation, will grow from 3,637 per parish in 2013 to 4,056 per parish in 2020 and 5,370 per parish in 2040.

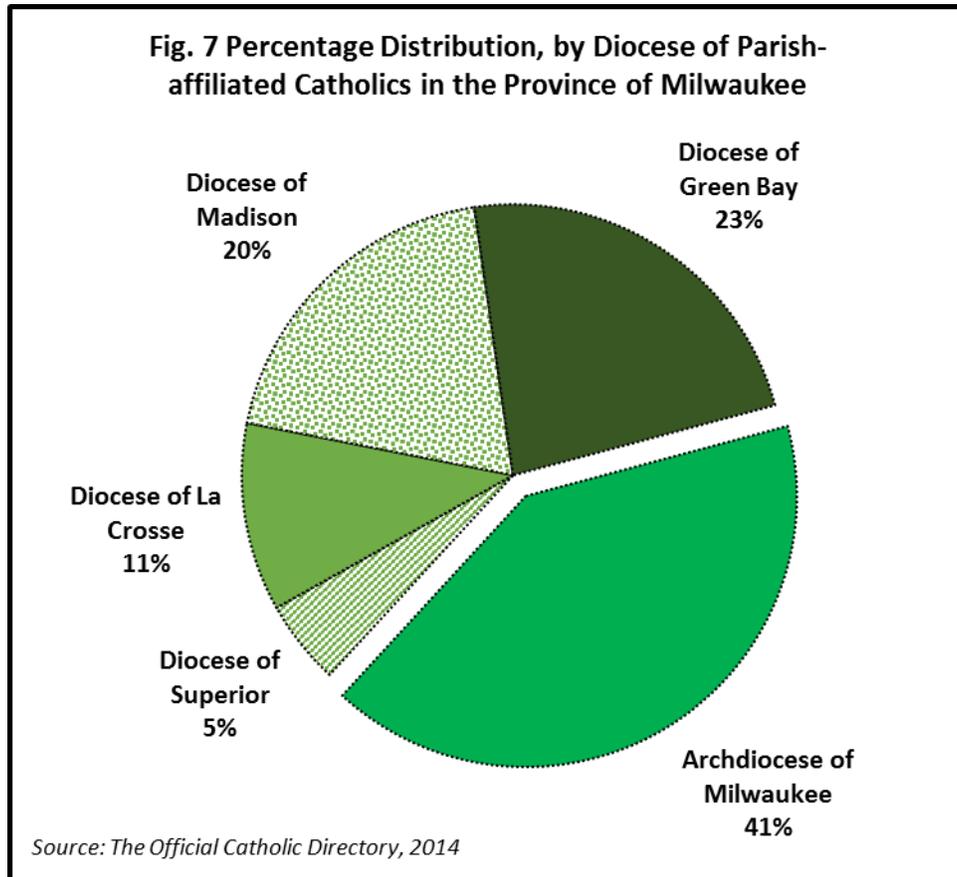

## **Catholics in the Archdiocese of Milwaukee**

### ***Archdiocese of Milwaukee and the Province of Milwaukee***

The Archdiocese of Milwaukee is one of five dioceses that constitute the Province of Milwaukee. The Archdiocese of Milwaukee has the largest population of parish-affiliated Catholics (591,890) and the Diocese of Superior the least (72,809). Differences exist among these dioceses with respect to the concentration of Catholics in the total population. The proportion of parish-affiliated Catholics ranges from a high of 33 percent in the Diocese of Green Bay to a low of 17 percent in the Diocese of Superior. The Archdiocese of Milwaukee has the third largest proportion of its population that is

Catholic and parish-affiliated (25 percent), just behind the Diocese of Madison (28 percent) and ahead of the Diocese of La Crosse (17 percent).

Overall, 25 percent of the population of the Province are parish-affiliated Catholics. This represents 1.4 million individuals. As shown in Figure 7 below, the parish-affiliated Catholics of the Archdiocese of Milwaukee represent 41 percent of this population. Twenty-three percent reside in the Diocese of Green Bay and 20 percent reside in the Diocese of Madison.

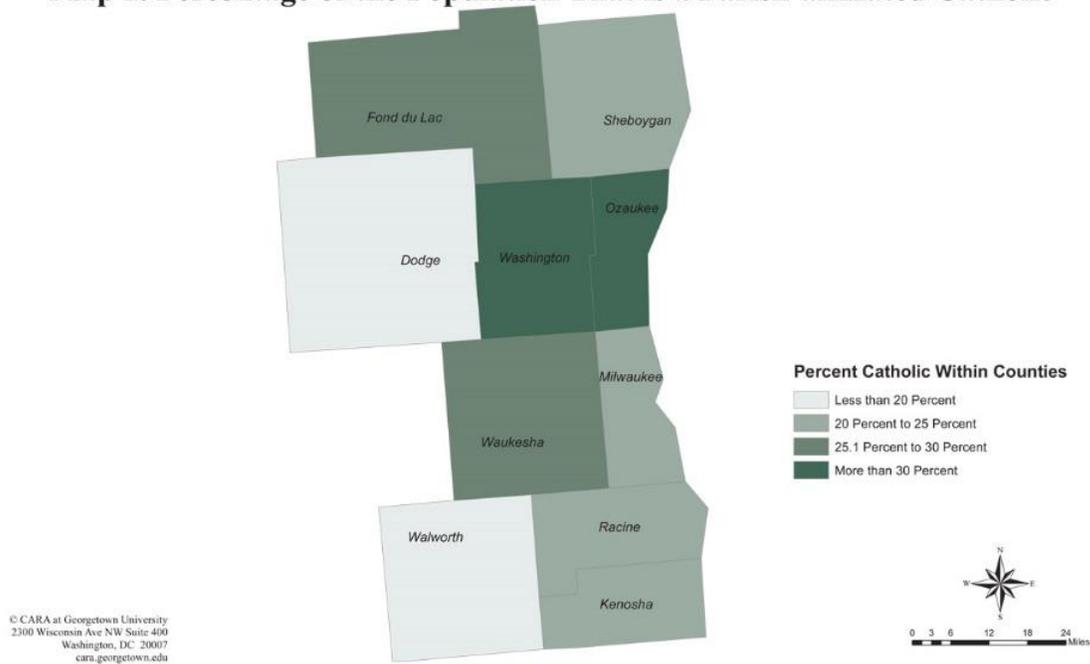

### ***Catholic Population Size and Distribution in the Counties of the Archdiocese***

Map 2 on the following page illustrates in greater detail the geographic boundaries of the Archdiocese of Milwaukee, including the 10 counties that make up the Archdiocese. As seen in the last section, 25 percent of the population of the Archdiocese of Milwaukee are parish-affiliated Catholics. There is variation among counties in the proportion of the total population that are parish-affiliated Catholics, ranging from about 15 percent in Dodge County to 33 percent in Ozaukee County.

Abutting Ozaukee County, Washington County has the second highest population proportion of parish-affiliated Catholics at 30 percent. Waukesha and Fond du Lac

counties have nearly similar percentages (each 29 percent). Walworth County has the second lowest population percentage (19 percent).

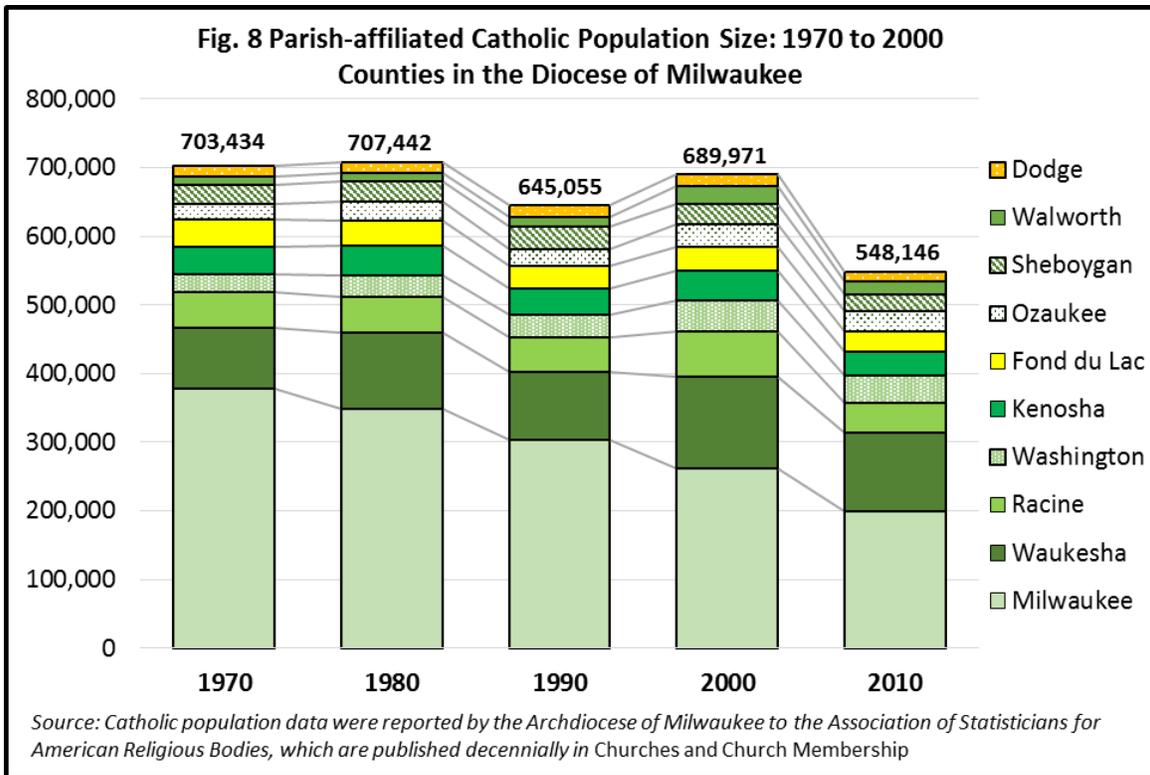

**Map 2. Percentage of the Population That is a Parish-affiliated Catholic**

In addition to varying concentrations of parish-affiliated Catholic within the general population, the Catholic population is also unequally dispersed across the geography of the Archdiocese. In other words, certain counties have a larger share of the total Catholic population of the Archdiocese living within their borders, similar to what Figure 7 showed for the distribution of Wisconsin Catholics across the different dioceses of the Milwaukee Province.

As stated earlier, the geography of the Archdiocese of Milwaukee is made up of 10 counties. Thirty-six percent of parish-affiliated Catholics reside in Milwaukee County and 21 percent in Waukesha County. Less than 10 percent reside in any other county in the Archdiocese with the least, 2 percent, residing in Dodge County. Historical Catholic population distributions are shown on the two following pages, first graphically (Figure 8) and secondly in table form (Table 4).

In 1970, the County of Milwaukee was home to 54 percent of parish-affiliated Catholics in the Archdiocese and Waukesha County was home to 13 percent. Thus, the biggest population shift in the Archdiocese from 1970 to 2010 has been an increasing number of parish-affiliated Catholics in Waukesha County, to the west of Milwaukee County, as the population of parish-affiliated Catholics has declined in Milwaukee County.

The distribution and growth of the Catholic population in the 10 counties of the Archdiocese of Milwaukee is depicted over time from 1970 to 2010 in Figure 8, above.<sup>7</sup> As can be clearly seen, the parish-affiliated Catholic population overall has declined in the Archdiocese of Milwaukee, from 703,434 in 1970 to 548,146 Catholics in 2000.

Table 4 on the following page shows the size of the Catholic population in each of the 10 counties, as well as the distribution of the Catholic population across the counties of the Archdiocese. Data are presented for 1970 and 2000, so that comparisons in population size and distribution can be made over time.

As a percentage, Walworth County and Washington County have experienced the strongest growth in the number of parish-affiliated Catholics from 1970 to 2010 (+83 percent and +52 percent, respectively). Waukesha and Ozaukee counties have also experienced growth (+30 percent and +27 percent, respectively). The number of parish-affiliated Catholics has declined during this period in the following counties: Milwaukee (-47 percent), Fond du Lac (-25 percent), Dodge (-22 percent), Racine (-18 percent), Sheboygan (-14 percent), and Kenosha (-13 percent).

<sup>7</sup> Data on Catholic population size over time were reported by the Archdiocese of Milwaukee to the Association of Statisticians for American Religious Bodies, and are published decennially by the Glenmary Research Center in *Churches and Church Membership*.

**Table 4. Parish-affiliated Catholic Population Size and Distribution, by County: 1970 and 2010, Diocese of Milwaukee**

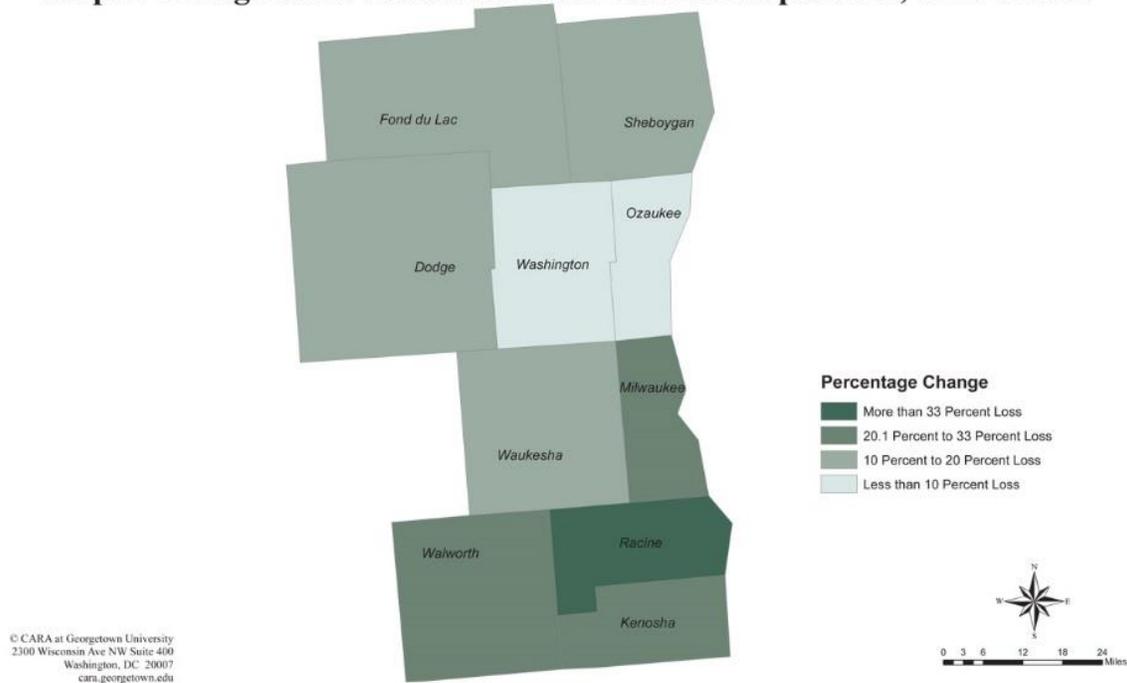

County	Catholics	1970		Catholics	2010		1970 to 2010 Change	
		Share of Total	Rank		Share of Total	Rank	Numeric	Percent
Milwaukee	377,604	54%	1	199,153	36%	1	-178,415	-47%
Waukesha	88,344	13	2	115,008	21	2	26,664	30
Racine	52,945	8	3	43,335	8	3	-9,610	-18
Kenosha	40,270	6	4	35,008	6	5	-5,262	-13
Fond du Lac	39,440	6	5	29,714	5	6	-9,726	-25
Sheboygan	27,907	4	6	24,036	4	8	-13,871	-14
Washington	26,292	4	7	39,943	7	4	13,651	52

Dodge	17,189	2	9	13,437	2	10	-3,752	-22
Walworth	10,849	2	10	19,868	4	9	9,019	86
<b>Archdiocese</b>	<b>703,434</b>	<b>100%</b>		<b>548,146</b>	<b>100%</b>		<b>-155,288</b>	<b>-22</b>

*Note: Although these data were reported by the Archdiocese of Milwaukee, the totals do not exactly match the total Catholic population size published in The Official Catholic Directory. The reporting differences are small and reflect an overall internal consistence in data quality and reporting by the Archdiocese.*

*Source: Catholic population data were reported by the Archdiocese of Milwaukee to the Association of Statisticians for American Religious Bodies, which are published decennially in Churches and Church Membership.*

Focusing more on short-term changes, Map 3 below, shows the changes in parish-affiliated Catholics by county between 2000 and 2010. In 2000, the number of parish-affiliated Catholics in Racine County had reached 65,874. This county lost 22,539 in the decade that followed for a drop of -34%. All counties in the Archdiocese experienced losses between 2000 and 2010. As a percentage, Washington County lost the least at -9 percent (representing a loss of 3,834 parish affiliated Catholics). In absolute numbers, Milwaukee County lost 62,332 parish-affiliated Catholics (representing a -24 percent decline since 2000).

**Map 3. Change in the Parish-affiliated Catholic Population, 2000 to 2010**

Even though the parish-affiliated Catholic population of the Archdiocese is not equally distributed throughout the 10 counties, with a majority living in Milwaukee and Waukesha counties, it is important to explore all areas and all people in order to gain a larger understanding of the population in which the Archdiocese of Milwaukee operates. The following section of the report highlights important socio-economic characteristics of the *total population* (Catholic and non-Catholic) living in the Archdiocese of Milwaukee.

## **Total Population Characteristics**

Exploring the characteristics of the total population (Catholic and non-Catholic) in the Archdiocese of Milwaukee and in its counties provides important insight into the characteristics of the community in which the Catholic Church in the Archdiocese ministers. A greater understanding of the total population living in the Archdiocese allows both Church leaders and lay Catholics to respond to the similarities and differences that exist between populations or geographies of the Archdiocese.

Utilizing data from recent U.S. Census Bureau studies and projections from the Wisconsin State Data Center, the following sections explore recently available data on race, ethnicity, age, homeowners and renters, income, and poverty for the total population living in the Archdiocese.

### ***Total and Hispanic Population Change: 2000-2013***

According to the 2010 Census, there were 2,325,869 people living in the 10 counties that constitute the Archdiocese of Milwaukee. More recent Census data from the American Community Survey (ACS) estimate a total population of 2,340,466 in 2013. This is an increase of 14,597 individuals from 2010 and equivalent to +0.6 percent population growth.

Forty-one percent of the total Archdiocesan population (Catholic and non-Catholic) live in Milwaukee County, where the city of Milwaukee is located, with an additional 17 percent living in neighboring Waukesha County. Together, the populations in these two counties make up nearly six in ten of the total population in the Archdiocese. In 2000, the same combined percentage of the population lived in these two counties.

From 2000 to 2013, the total population of the Archdiocese has increased by +4.8 percent, or just over 111,700 people. For the United States as a whole, the total population grew more quickly during this period at +12.3 percent.

Between 2000 and 2013, certain counties of the Archdiocese experienced a larger percentage total population increase than others. As seen in Table 5 on the following page, the counties that experienced double-digit population growth, as a percentage, were Washington (+13 percent), Kenosha (+ 12 percent), and Walworth (+10 percent). In absolute numbers, Waukesha added more than 33,000 residents and Kenosha added more than 18,000 during this period.

The Hispanic<sup>8</sup> population, the majority of whom identify as Catholic, has grown at a faster pace than the total population in many areas of the United States.

---

<sup>8</sup> Note that Hispanics may be of any race.

**Table 5. Total and Hispanic Population Change: 2000 and 2013, Diocese of Milwaukee**

<b>County</b>	<b>Total Population</b>				<b>Hispanic Population</b>

*Source: U.S. Census Bureau.*

For some Archdioceses, growth in the Catholic population has been fueled by growth in the Hispanic population. In response to a growing Hispanic presence in the area, local parishes may experience a demand for more Masses celebrated in Spanish and a greater need for Spanish-speaking clergy.

As shown in Table 5 above, the Hispanic population grew by 70 percent in the Archdiocese from 134,358 people in 2000 to 457,926 people 13 years later. Several counties now have a sizeable and growing Hispanic community. The Hispanic population doubled between 2000 and 2013 in the following counties: Washington (+152 percent), Fond du Lac (+146 percent), and Ozaukee (+111 percent). Three counties have Hispanic populations that exceed 20,000 individuals: Milwaukee (133,843), Racine (23,990), and Kenosha (20,634).

If current growth trends of the Hispanic population and total population persist, the Hispanic presence in several counties of the Archdiocese will continue to increase. This presence will increasingly be felt in Catholic parishes across the Archdiocese of Milwaukee as the sacramental and spiritual needs of Hispanic Catholics increase. The Archdiocese will most likely face both cultural and linguistic challenges as its parishes respond to the needs of this growing Hispanic population.

### ***Projected Total Population Growth and Underlying Change Components***

Exploring where and how the total population is expected to grow is an important planning tool. The past section looked at areas of recent growth and, in particular, the recent growth in the Hispanic population in the Archdiocese of Milwaukee. This section examines how large the total population of the Archdiocese is expected to grow, which counties will experience the largest population changes, and what dynamics (births, deaths, and migration) will underlie the population growth in the Archdiocese.

As seen in Table 6 on the following page, the total population in the Archdiocese is expected to increase by 4 percent between 2013 and 2020. Between 2020 and 2030 the population is expected to grow even faster at 4.8 percent before slowing in the next decade (2030 to 2040) to 2 percent growth. Overall, between 2013 and 2040 the total population of the Archdiocese is expected to grow by 11.5 percent to 2.6 million.

Three counties are expected to grow by more than 20 percent between 2013 and 2040. These counties include Kenosha (+25.0 percent, +41,913), Washington (+23.5 percent, +31,151), and Walworth (+20.1 percent, +20,735). All counties are expected to grow by at least 6 percent with Milwaukee County experiencing the slowest expected growth at 6.3 percent between 2013 and 2040.

**Table 6. Projected Total Population Change: 2013 to 2040**

County	Total Population Size				Percent Change		
	2013	2020	2030	2040	2013-20	2020-30	2030-40
Milwaukee	956,023	972,610	980,450	1,016,250	1.7%	0.8%	3.7%

Dodge	88,344	92,035	97,020	95,650	4.2	5.1	-1.4
Ozaukee	87,054	89,715	94,955	94,370	3.1	5.5	0.6
<b>Archdiocese</b>	<b>2,340,466</b>	<b>2,433,865</b>	<b>2,556,120</b>	<b>2,608,400</b>	<b>4.0%</b>	<b>4.8%</b>	<b>2.0%</b>

*Source: Wisconsin Demographic Services Center, Projected Components of Population Change for Wisconsin Counties.*

Below, Figure 9 shows the number of people by which the total population of the Archdiocese of Milwaukee is expected to grow, in ten-year increments between 2010 and 2040. As Table 6 showed in percentage terms, Figure 9 indicates that while the total population is increasing, it is growing at a decreasing rate.

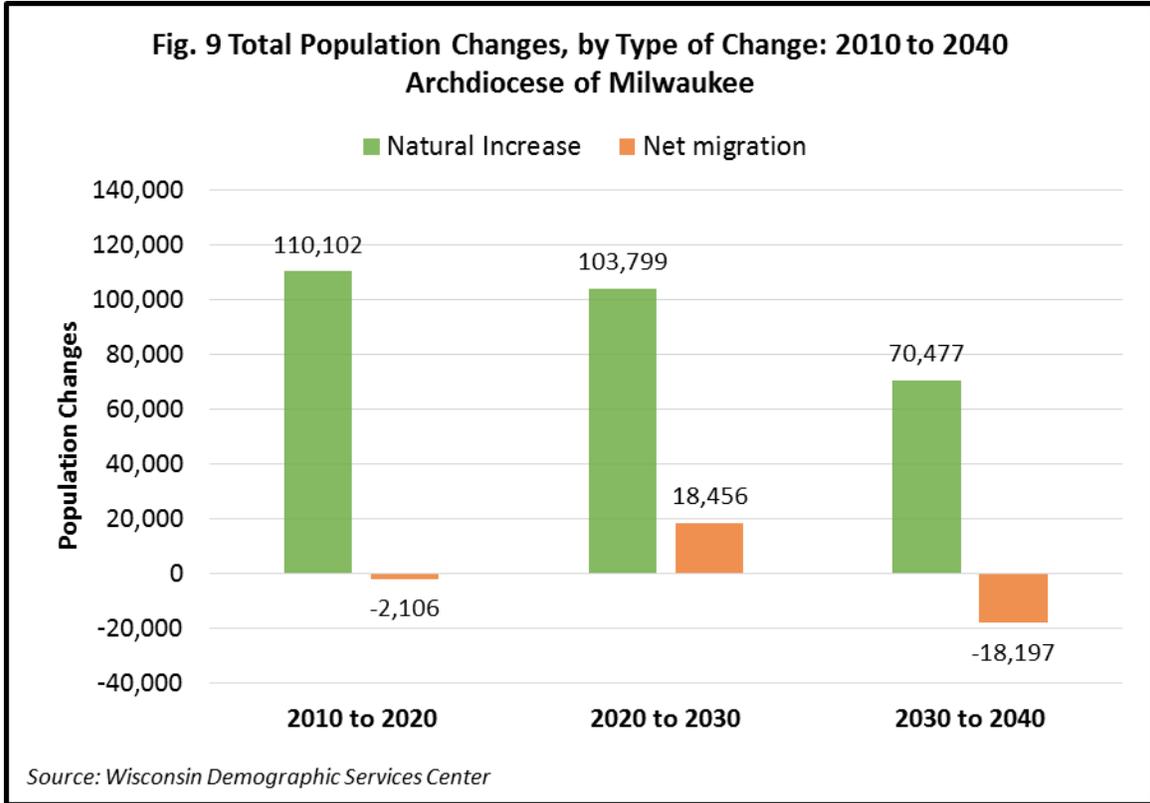

Figure 9 also displays what *type* of population dynamic underlies the total population growth during this time period. Any type of population change is due to three forces: births, deaths, and migration into or out of a given population. The difference between births and deaths is called “natural increase” and “net migration” refers to the net number of people gained (or lost) in an area when the population moving out of an area are subtracted from population moving into an area.

Most of the future growth in the population of the Archdiocese is in natural increase, with births outnumbering deaths. Net migration will result in population losses in this decade and in the 2030s. Only in the 2020s is the Archdiocese expected to increase its population through net migration, more people moving into the area than leaving it.

Assuming that the Archdiocese of Milwaukee’s Catholic population has similar birth, death, and in- and out- migration patterns to that of the total population as a whole, it can be expected that the Catholic Archdiocese of Milwaukee will have a gradually increasing number of Baptisms to perform (natural increase implies a larger number of births than deaths), as more young Catholics continue to be born into the Archdiocese. Indeed, natural increase often flows out of net migration, as young adults and young families first move to an area and then begin their families. It is important to foster a

welcoming faith environment so that new and young Catholic families who move into the Archdiocese will feel welcome at their local Catholic parish.

Table 7 on the following two pages shows the county-level population change data that were aggregated to the Diocesan level in Figure 9. In three counties over time, natural increase will consistently contribute to the projected population growth more than net migration. These include Kenosha, Milwaukee, and Racine counties, which collectively will increase their populations by more than 272,000 individuals between 2010 and 2040.

In two counties, total population natural increase is negative across the decade projections, indicating that more deaths than births are projected. This includes Dodge and Ozaukee counties, which will collectively see their populations decline by nearly 6,300 individuals between 2010 and 2040.

Waukesha County will attract the largest number of net migrants adding 20,799 to the county population between 2010 and 2020, another 34,367 between 2020 and 2030, and finally another 8,345 between 2030 and 2040. Other counties that will consistently add to the population through net migration include Dodge, Fond du Lac, Kenosha, Walworth, and Washington.

Milwaukee County will lose significant numbers to net migration with more people leaving the area than moving in each of the next three decades. Still, the total population of Milwaukee County will continue to grow due to natural increase.

## Race and Ethnicity

As Figure 10 highlights below, the total population in the Archdiocese of Milwaukee is less racially and ethnically diverse than the total population of the United States. Thirteen percent of the Archdiocese’s population is black or African American which is similar to the United States population as a whole. The population of the Archdiocese is 10 percent Hispanic compared to 17 percent of the U.S. population. Six percent of the Archdiocese’s population is Asian or Pacific Islander which is larger than the U.S. population at 3 percent. Few people in the Archdiocese self-identify as American Indian or a Native American and this is consistent with the demography of the country as a whole. Overall 72 percent of the population of the Archdiocese self-identifies as non-Hispanic white compared to 63 percent of the total U.S. population.

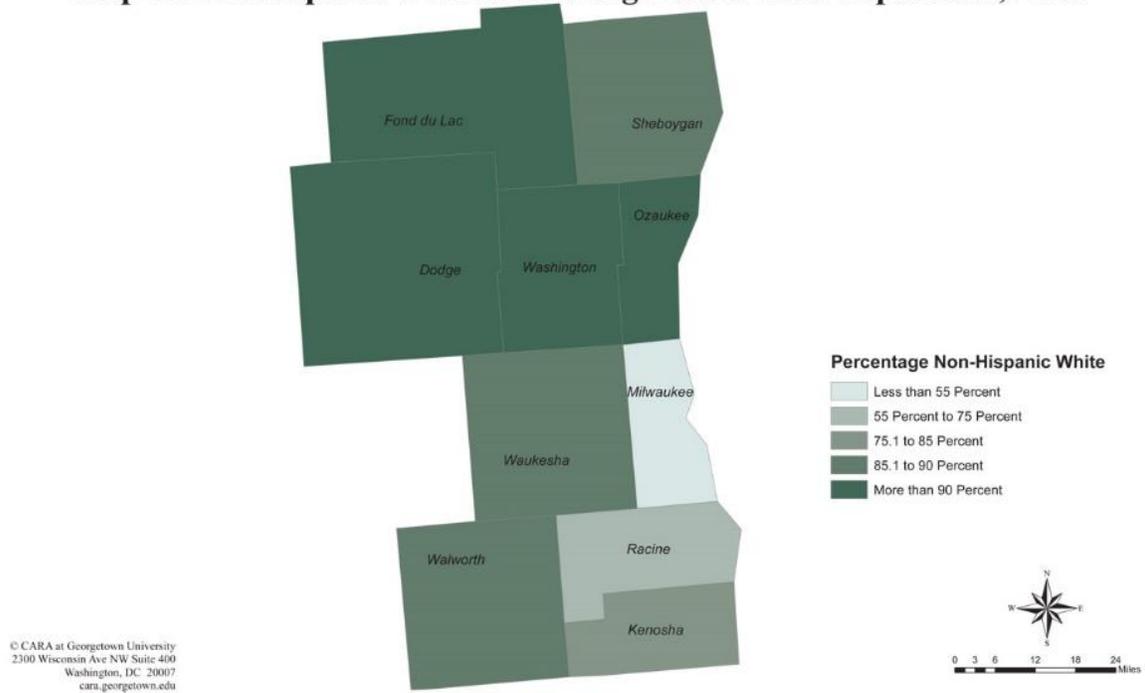

As was discussed in the previous section, Hispanics tend to identify as Catholic at a higher rate than the total population. For the Catholic community in the Archdiocese of Milwaukee, this minority has a growing and significant presence.

Map 4 on the following page shows the proportion of the total population that is non-Hispanic white for the 10 counties of the Archdiocese. This proportion is the highest across the northwestern part of the Archdiocese. In the southwestern area of the Archdiocese, the counties of Milwaukee, Racine, and Kenosha all have about three quarters or less of their total population identifying as non-Hispanic white. In the largest county, Milwaukee, 53 percent of the population self-identifies as non-Hispanic white.

Nine in ten or more residents of the following counties self-identifies as non-Hispanic white: Washington (94 percent), Ozaukee (93 percent), Dodge (91 percent), Fond du Lac (91 percent), and Waukesha (90 percent).

**Map 4. Non-Hispanic White Percentage of the Total Population, 2013**

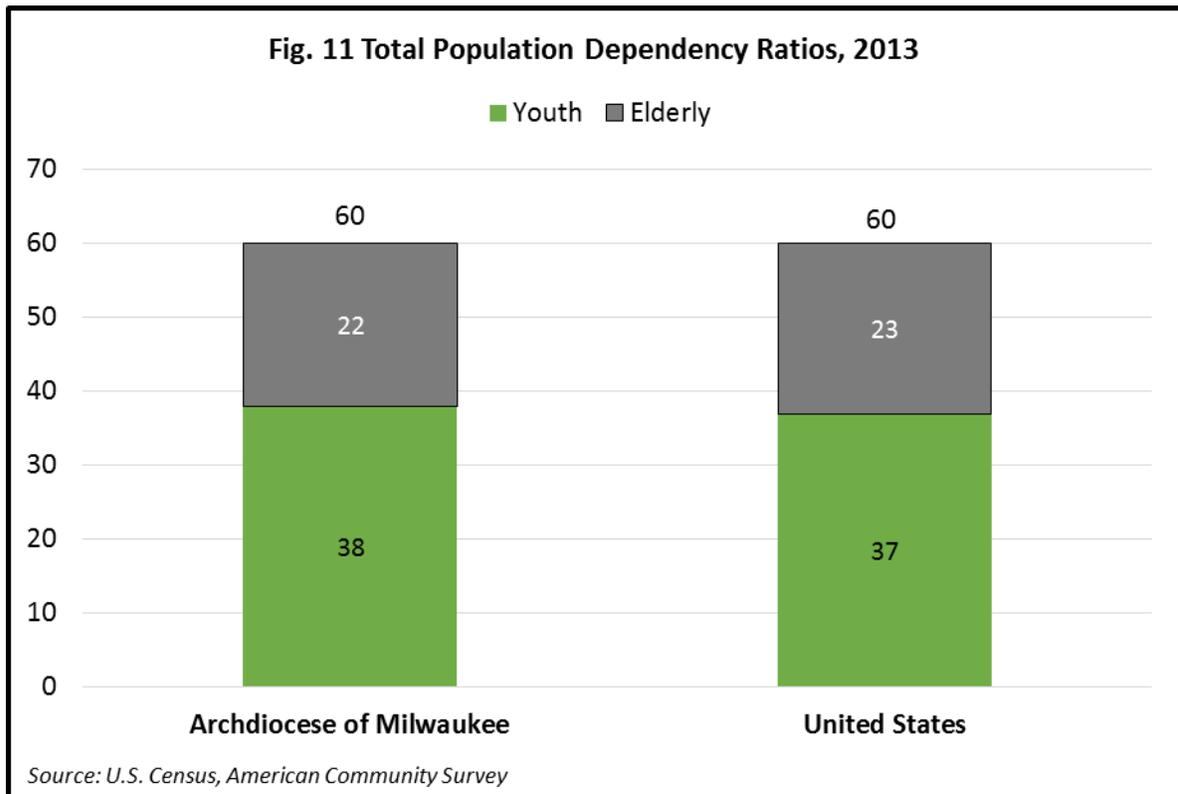

If Hispanic population growth continues to outpace total population growth, as shown in Table 5, Hispanics will have an increasingly larger presence in the Archdiocese in the future.

## Age Structure of the Total Population

For the Catholic population, age and the life course are typically associated with various sacraments, such as Baptism, Confirmation, Marriage, or Holy Orders. Allocating resources to Catholic schools or to parish religious education is of greater importance to young Catholic families, while older Catholics may have other needs related to retirement planning or bereavement counseling.

One standard measure of the age composition of a population is a dependency ratio, which relates the number of youth (under age 18) or elderly (people aged 65 or older) per 100 people in the “working ages” of 18 to 64. Although not all youth or older people are dependents, nor are all people aged 18 to 64 working, this is a standard demographic measure by which comparisons can be made and approximates the level of support that workers must provide to support non-workers.

Figure 11 presents the youth, elderly, and total dependency ratios in the Archdiocese of Milwaukee and the United States. The Archdiocese has a very similar dependency ratio to the United States overall. For both, there are approximately 60 dependents per 100 working age. These dependents are more likely to be under 18 than over 64.

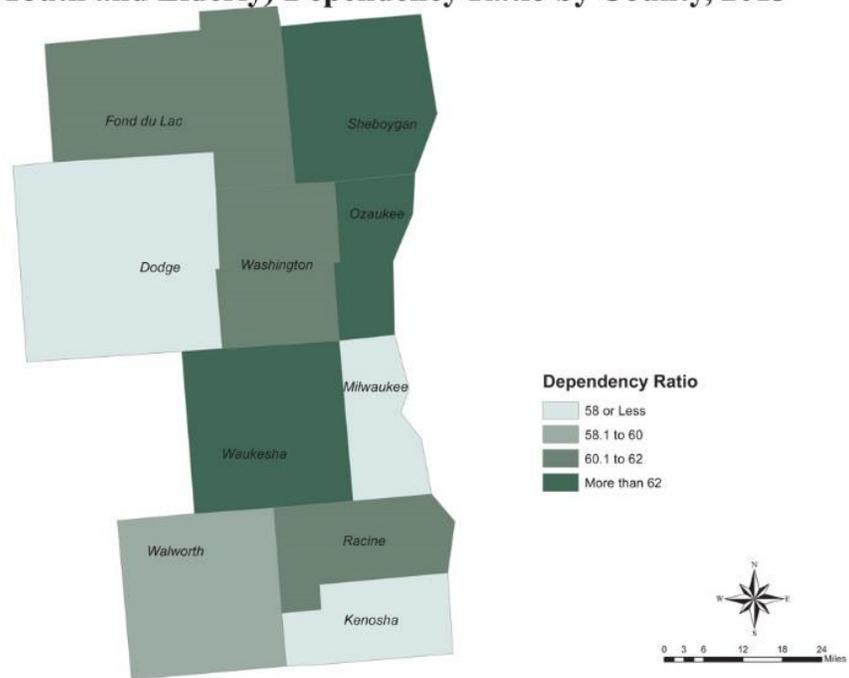

With 38 youth under the age of 18 for every 100 people in the working ages 18 to 64, the youth dependency ratio in the Archdiocese of Milwaukee is similar to the United States (37 youth for every 100 people in the working ages). The elderly dependency

ration in the Archdiocese is also similar (22 people aged 65 and older for every 100 people in the working ages, compared with 23, respectively).

Map 5 provides a more detailed view of total dependency ratios across the Archdiocese of Milwaukee. Table 8, which follows, provides greater detail on the total, youth, and elderly dependency ratios in each county. By comparing the map and table, one can identify whether a young population or an older population is the driving force behind a county's high dependency ratio.

*Source: U.S. Census, American Community Survey*

Four counties have a total dependency ratio that is *lower* than the Archdiocesan average of 60: Milwaukee (57), Kenosha (58), Dodge (58), and Walworth (59). In Milwaukee and Kenosha counties the youth dependency ratios are 39 compared to elderly dependency ratios of 19. By comparison, in Walworth and Dodge counties the youth dependency ratios are lower (35 and 33, respectively) and the elderly dependency ratios are higher (24 and 25, respectively).

The highest total dependency ratios in the Archdiocese are in Ozaukee (64), Sheboygan (63), and Waukesha (63). The following counties have the highest elderly dependency ratios: Fond du Lac (26), Dodge (25), and Washington (25). The highest youth dependency ratios are in the following counties: Milwaukee (39), Racine (39), and Kenosha (39).

Table 8 shows details in the age distribution across the counties of the Archdiocese, with both population size and percent distribution showing the magnitude of the following populations: youth (aged 0-17), young adults (aged 18-39), adults (aged 40-64) and older adults (aged 65+).

Milwaukee and Kenosha counties have the largest shares of their population under the age of 18 (25 percent). Ozaukee has the largest percent of its population in the oldest age group (17 percent).

For planning purposes, age distributions and parish age structures should be explored closely in parishes in these counties so that parishioner's needs are effectively met. Areas with high proportions of their population that is of school-age may want to make sure that they are meeting the needs of their youngest Catholics and families, while those in areas with high proportions in the oldest age groups will have different parishioner needs to address.

## Home Ownership

The ability to buy a home requires a certain amount of financial stability, both in the past as well as in expectations for the future. Home ownership often results in increased financial security as well as stability. People in rented housing tend to be more transitory than people in owned homes, and this can affect several facets of a person's life. Children in families with owned homes may not change schools as often as children in rented housing. For Catholics, people in owned homes may be more likely to register with and maintain a longer association with their local parish.

Figure 12, below, shows the distribution of rented and owned housing units in the Archdiocese of Milwaukee and the United States. More than three in four housing units (apartments, houses, mobile homes, or other) in the Archdiocese of Milwaukee are owner-occupied (77 percent), which is a higher rate of home-ownership than is seen in the United States as a whole (66 percent).

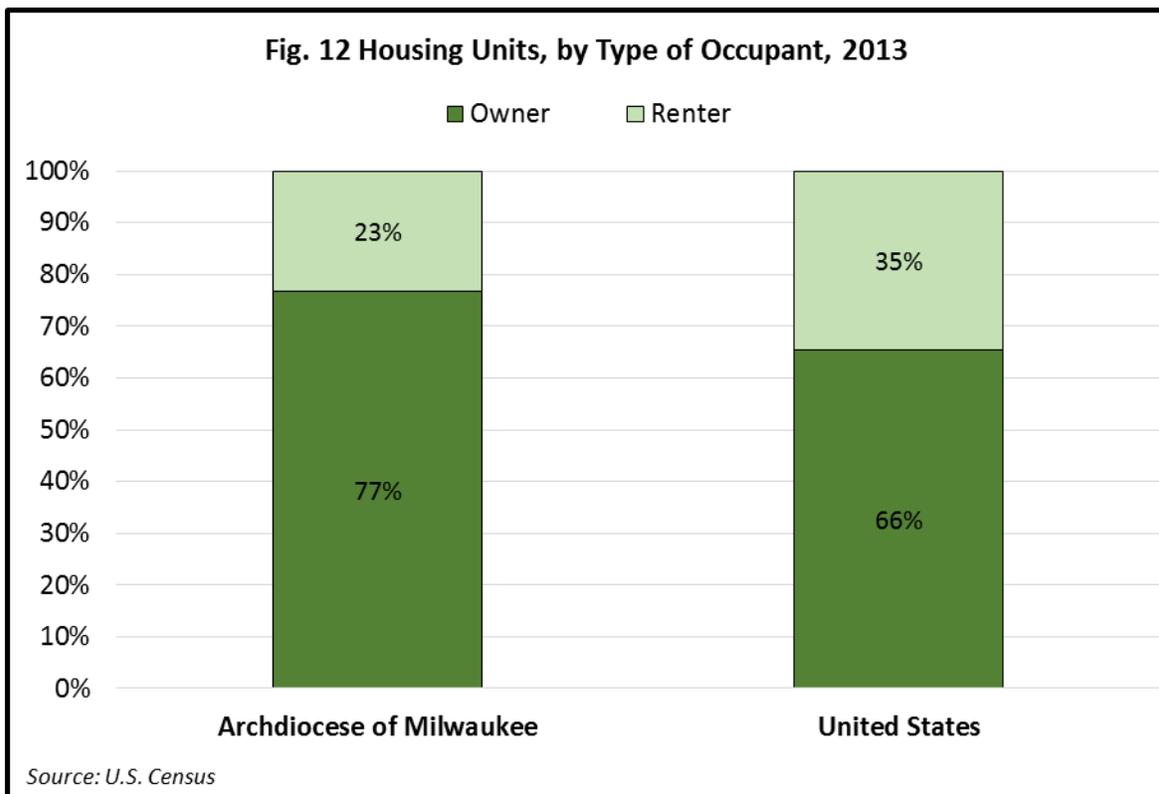

Table 9 on the following page shows the variations across counties in the distribution of rented and owned homes in the Archdiocese. The percent of housing units occupied by owners ranges from 52 percent in Milwaukee County to 79 percent in Ozaukee County. It is common for counties with urban areas (such as Milwaukee) to have higher rental rates, while more rural and suburban areas tend to be populated more with home-owners.

**Table 9. Home Ownership, Diocese of Milwaukee**

<b>County</b>	<b>Housing units, 2013</b>	<b>Home ownership rate, 2008-12</b>	<b>Housing units in multi-unit structures, percent, 2008-12</b>	<b>Median value of owner-occupied housing units, 2008-12</b>
Milwaukee	416,621	52%	47%	\$162,900
Waukesha	161,677	77	23	\$257,700
Racine	82,052	69	28	\$174,600
Kenosha	69,354	68	27	\$174,300
Washington	55,131	78	21	\$229,100
Sheboygan	50,491	72	27	\$153,800
Walworth	51,507	70	22	\$198,600
Fond du Lac	44,198	71	24	\$145,800
Dodge	37,034	74	21	\$156,000
Ozaukee	36,435	79	22	\$255,600

*Source: U.S. Census, American Community Survey*

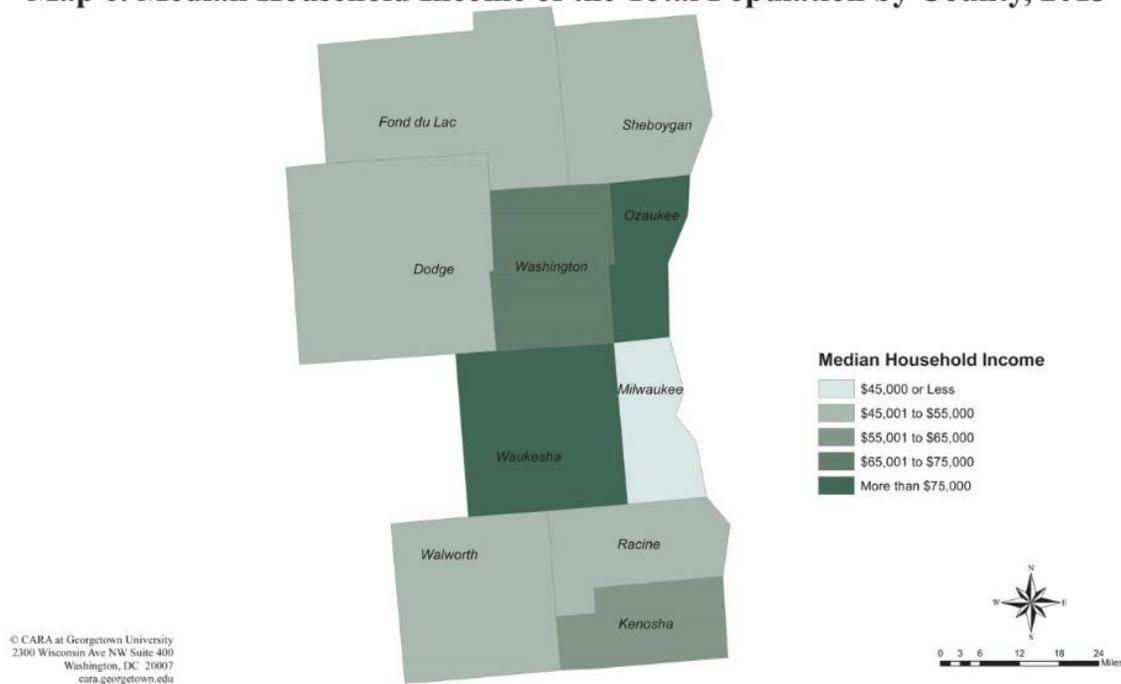

Housing in the Archdiocese of Milwaukee also varies widely in the median value of owned homes (see Table 9). Median home values also vary across the counties, ranging from \$145,800 in Fond du Lac County to \$257,700 in Waukesha County.

Homes in four counties have median values exceeding \$175,000 including: Walworth (\$198,600), Washington (\$229,100), Ozaukee (\$255,600), and Waukesha (\$257,700).

## Household Income

Household and family income can affect one's ability to pursue educational opportunities, buy a home, and adequately feed or clothe family members. Income is also a primary factor for determining the poverty status of a person or family. Median household income refers to the dollar figure at which half of all households have an income below and half have an income above this point. Map 6 displays the median household income within each county for the Archdiocese of Milwaukee.

**Map 6. Median Household Income of the Total Population by County, 2013**

Ozaukee and Waukesha counties, adjacent to Milwaukee County, have the highest median household incomes of more than \$75,000 per year. These two counties also have the highest costs of housing in these area, thus it is not surprising to find higher levels of income here.

Milwaukee County has a median household income of less than \$45,000 per year. Two counties South of Milwaukee, Walworth and Racine counties have slightly higher median household incomes as do counties at the north of the Archdiocese, including Dodge, Fond du Lac, and Sheboygan counties.

Washington County, adjacent to the two highest median income counties in the Archdiocese has a median household income that is higher than all other counties. Kenosha county, north of the Archdiocese of Chicago also has a relatively elevated median household income compared to most other counties in the Archdiocese of Milwaukee.

Ozaukee County was highlighted earlier for having the largest share of its population that is aged 65 and older. This older population may be living on a fixed retirement or social security income, which is typically lower than annual income earned during the working years. However, this older generation often has paid off the mortgage for their primary residence and may in fact have relatively low, fixed housing costs.

Indeed, as was seen in Table 9, Ozaukee County has the highest proportion aged 65 and older (17 percent) and the highest rate of home-ownership (79 percent) in the Archdiocese.

Below, Figure 10 presents precise per capita income and median household income in the counties of the Archdiocese of Milwaukee. Per capita income is income per person in the county calculated by dividing the total income of an area by the total population.<sup>9</sup> Nationally and in the Archdiocese of Milwaukee, median household income is approximately twice as large as per capita income.

Ozaukee County has the highest per capita income of \$42,180 per year and the highest median household income of \$75,854 per year.

<b>County</b>	<b>Per Capita Income, 2008-12</b>	<b>Median Household Income, 2008-12</b>
Milwaukee	\$24,254	\$43,599
Waukesha	\$37,282	\$75,689
Racine	\$27,292	\$54,900
Kenosha	\$27,012	\$55,117
Washington	\$32,159	\$66,485
Sheboygan	\$25,793	\$52,967
Walworth	\$27,005	\$54,443
Fond du Lac	\$26,331	\$53,399
Dodge	\$24,907	\$53,782
Ozaukee	\$42,180	\$75,854

*Source: U.S. Census, American Community Survey*

Waukesha and Washington counties are the next two highest income regions of the Archdiocese. Waukesha County has a per capita income of \$37,282 and a median household income of \$75,689. Washington County has a per capita income of \$32,159 and a median household income of \$66,485.

The County of Milwaukee, which has the highest percentage of working-age persons (64 percent) and youth dependents (25 percent), the lowest home ownership rate (52 percent) and non-Hispanic white population percentage (53 percent) also has the lowest income per capita of

<sup>9</sup> In cross-national studies this is equivalent to Gross Domestic Product (GDP) per capita. This statistic does *not* reveal the inequalities in the distribution of income among individuals.

\$24,254 and median household income of \$43,599. These income levels are lower than in the United States as a whole where per capita income for 2008 to 2012 averaged \$28,051 and median household income measured \$53,046 per year.

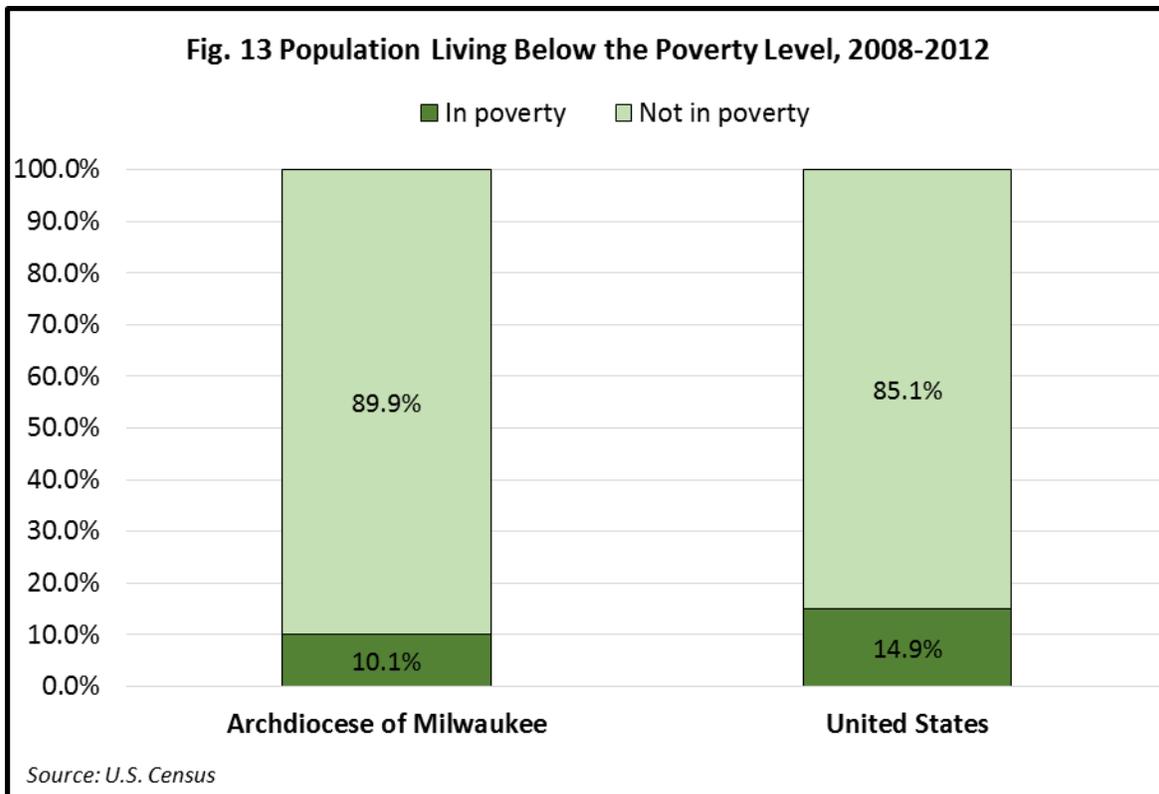

Dodge County has only a slightly higher income per capita than Milwaukee County at \$24,907. However, its annual median household income here is more than \$10,000 higher than Milwaukee County (\$53,782 compared to \$43,599).

## Poverty

The total income of a family or individual is directly related to that family's or individual's poverty status. The population living in poverty represents the extreme end of the low incomes shown in Figure 13 below.

Whether or not a person is considered to be living in poverty depends on factors other than income, however. Family size and the age of family members are also factored into a determination of whether a family (and all of its members) is considered to be poor. These family characteristics are combined with total family income to determine the poverty threshold income level (poverty line) for a particular family.

Poverty affects many aspects of an individual's and a family's life, from nutrition and health to education and occupation opportunities. Movement in and out of poverty can be a regular occurrence, particularly when recurrent unemployment is a major factor in the poverty status of a family. Charitable organizations, including the Catholic Church, are often called upon to assist the population living in poverty, through social service ministry, food donations, and temporary shelter.

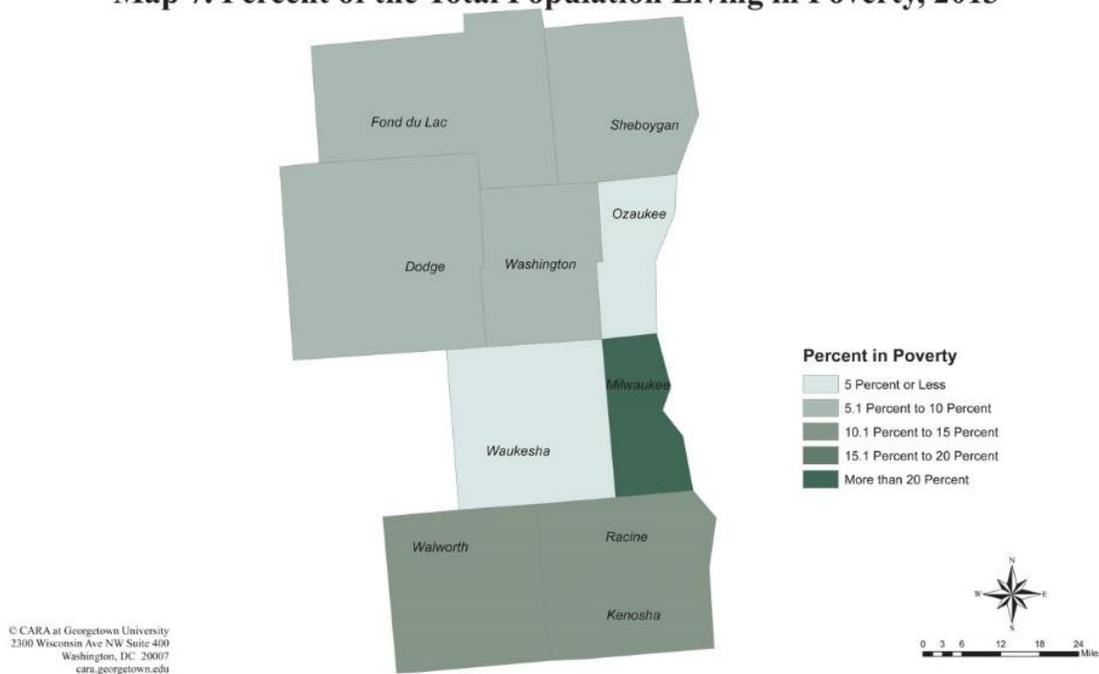

During the 2008 to 2012 period, coinciding with a national period of economic recession, one in ten people in the Archdiocese were living in poverty compared to 15 percent of the U.S. population as a whole.

The designation as living in poverty depends on the total annual income of the family. Family members that are part of a family with incomes below the poverty line are categorized as living in poverty.<sup>10</sup> In 2012, an individual living alone with \$11,720 or less in annual income was considered living in poverty. A couple with annual incomes totaling \$14,937 or less and a family of four with \$23,492 in annual income were considered living in poverty.

Map 7 shows the share of the population living in poverty across the Archdiocese. Given the income-based definition for poverty, the lowest-income county in the Archdiocese also has the highest percentage of residents living in poverty. About one in five Milwaukee County residents were living in poverty in 2013. By comparison, in the adjacent counties of Ozaukee and Waukesha fewer than one in 20 were living in poverty. South of the County of Milwaukee three counties have more than one in ten residents living in poverty including Walworth, Racine, and Kenosha counties.

**Map 7. Percent of the Total Population Living in Poverty, 2013**

The differences in poverty rates between the counties in the Archdiocese of Milwaukee may be a result of underlying differences in local economies, job availability, urban and rural residency (and the associated cost of living), educational attainment differences, as well as differences in the social safety net offered by local governments and charities.

Catholic parishes in these different areas will have different needs to address in the local community with regard to Catholics as well as non-Catholics. Poverty affects all members of a community to one degree or another, including social, religious, or commercial organizations.

<sup>10</sup> Even the population with incomes between 100 percent and 175 percent of the poverty threshold income level are deemed to be “at risk” for poverty.

Poverty is best understood at the local level so that residents and organizations can assist one another in addressing these needs.

As shown in Table 11 below, there are variations in poverty levels by race and ethnicity within counties. In most counties non-Hispanic white residents are least likely to be living in poverty with the exception of Washington, Kenosha, and Ozaukee counties where Asian residents have lower poverty rates than non-Hispanic white residents. Black and African American residents tend to have the highest poverty rates with the exception of Washington County where Hispanic residents are most likely to be living in poverty.

<b>County</b>	<b>Non-Hispanic white</b>	<b>Hispanic</b>	<b>Black or African American</b>	<b>American Indian or Alaska Native</b>	<b>Asian</b>
Milwaukee	10.4%	28.3%	38.3%	26.4%	19.6%
Waukesha	4.3%	14.0%	16.6%	-	4.3%
Racine	7.4%	22.9%	36.8%	-	14.7%
Washington	4.8%	20.6%	13.4%	-	0.1%
Kenosha	8.8%	23.8%	31.2%	-	4.9%
Fond du Lac	8.4%	24.6%	-	-	-
Ozaukee	4.2%	14.3%	17.1%	-	3.6%
Sheboygan	6.6%	32.1%	-	-	15.6%
Walworth	10.8%	25.4%	-	-	-
Dodge	7.7%	18.3%	-	-	-

*Source: U.S. Census, American Community Service. Minimum 1,000 population in race ethnicity group with “-” entries representing counties with fewer than 1,000 population for each group.*

Thirty-eight percent of black or African American residents in Milwaukee County were living below the poverty line in 2012 as were 28.3 percent of Hispanic residents, 26.4 percent of American Indian or Alaska Native residents, 19.6 percent of Asian residents, and 10.4 percent of non-Hispanic white residents of this county.

## Parish-level Characteristics

According to records maintained by the Archdiocese of Milwaukee, in 2013 there were 202 parishes across 15 districts in the Archdiocese.<sup>11</sup> This section of the report analyzes data for these districts and parishes.

Prior to showing these data we first provide a parallel profile, where possible, of the typical parish in the United States from CARA’s 2013 National Survey of Catholic Parishes (NSCP). This nationally representative survey of pastors and parish life coordinators (i.e., those entrusted with the pastoral care of a parish; Canon 517.2) asked about the characteristics of their parish and parish life.

As shown below, the typical parish, as represented by average numbers, in the United States has three to four Masses per weekend in church with a seating capacity of 523 seats. Attendance at all these Masses is just more than 1,000. Within a total weekend seating capacity of 2,118 (seats multiplied by Masses) in a typical parish approximately 44% of seats are likely to be filled, on average. Parishes report income (or revenue) annually of \$801,000 and expenses of \$756,000, an average.

<b>Table 12a. Church Capacity, Mass, Attendance in the Diocese, and Income/Expense, United States in 2013</b>		
	<b>Average</b>	<b>Median</b>
<i><b>Masses and Mass Attendance</b></i>		
Number of weekend Masses	3.6	3
Church seating capacity	523	450
Attendance at all Sunday/Saturday Vigil Masses	1,004	600
Weekend seating capacity at all Masses	2,118	1,600
Capacity filled	44%	41%
<i><b>Budget</b></i>		
Total income (thousands)	\$801	\$515
Total Expenses (thousands)	\$756	\$475

In District 1, parishes average four Masses per weekend (a minimum of two and maximum of five). On average, parishes report that 34 percent of seats are filled at these Masses. This is lower than the typical U.S. parish that uses 44 percent of its capacity, on average. The average seating capacity for parishes in District 1 is larger than the typical parish in the United States (612 compared to 523). On average, annual income in District 1 parishes is \$652,000 and expenses are \$630,000. These budgets are smaller than the typical parish in the United States.

In District 2, parishes average three Masses per weekend (a minimum of two and maximum of five). On average, parishes report that 34 percent of seats are filled at these Masses.

---

<sup>11</sup> This includes districts 1 through 10 and 12 through 16. There are no parishes or data reported for a district 11.

This is lower than the typical U.S. parish that uses 44 percent of its capacity, on average. The average seating capacity for parishes in District 2 is larger than the typical parish in the United States (610 compared to 523). On average, annual income in District 2 parishes is \$850,000 and expenses are \$804,000. These budgets are slightly larger than the typical parish in the United States.

In District 3, parishes average three Masses per weekend (a minimum of one and maximum of eight). On average, parishes report that 48 percent of seats are filled at these Masses. This is similar to the typical U.S. parish that uses 44 percent of its capacity, on average. The average seating capacity for parishes in District 3 is similar to the typical parish in the United States (588 compared to 523). On average, annual income in District 3 parishes is \$623,000 and expenses are \$606,000. These budgets are smaller than the typical parish in the United States.

In District 4, parishes average four Masses per weekend (a minimum of three and maximum of five). On average, parishes report that 43 percent of seats are filled at these Masses. This is lower than the typical U.S. parish that uses 44 percent of its capacity, on average. The average seating capacity for parishes in District 4 is larger than the typical parish in the United States (791 compared to 523). On average, annual income in District 4 parishes is \$1,804,000 and expenses are \$1,764,000. These budgets are larger than the typical parish in the United States.

In District 5, parishes average three Masses per weekend (a minimum of two and maximum of four). On average, parishes report that 47 percent of seats are filled at these Masses. This is higher than the typical U.S. parish that uses 44 percent of its capacity, on average. The average seating capacity for parishes in District 5 is larger than the typical parish in the United States (718 compared to 523). On average, annual income in District 5 parishes is \$1,549,000 and expenses are \$1,428,000. These budgets are larger than the typical parish in the United States.

In District 6, parishes average three Masses per weekend (a minimum of two and maximum of five). On average, parishes report that 46 percent of seats are filled at these Masses. This is higher than the typical U.S. parish that uses 44 percent of its capacity, on average. The average seating capacity for parishes in District 6 is about the same than the typical parish in the United States (522 compared to 523). On average, annual income in District 6 parishes is \$1,113,000 and expenses are \$1,033,000. These budgets are larger than the typical parish in the United States.

In District 7, parishes average two Masses per weekend (a minimum of zero and maximum of four). On average, parishes report that 44 percent of seats are filled at these Masses. This is the same as the typical U.S. parish that uses 44 percent of its capacity, on average. The average seating capacity for parishes in District 7 is smaller than the typical parish in the United States (324 compared to 523). On average, annual income in District 7 parishes is \$296,000 and expenses are \$267,000. These budgets are smaller than the typical parish in the United States.

In District 8, parishes average three Masses per weekend (a minimum of one and maximum of eleven). On average, parishes report that 34 percent of seats are filled at these Masses. This is lower than the typical U.S. parish that uses 44 percent of its capacity, on average. The average seating capacity for parishes in District 7 is larger than the typical parish in the United States (649 compared to 523). On average, annual income in District 7 parishes is \$681,000 and expenses are \$620,000. These budgets are smaller than the typical parish in the United States.

In District 9, parishes average three Masses per weekend (a minimum of one and maximum of four). On average, parishes report that 43 percent of seats are filled at these Masses. This is about the same as the typical U.S. parish that uses 44 percent of its capacity, on average. The average seating capacity for parishes in District 9 is larger than the typical parish in the United States (605 compared to 523). On average, annual income in District 9 parishes is \$561,000 and expenses are \$562,000. These budgets are smaller than the typical parish in the United States.

In District 10, parishes average three Masses per weekend (a minimum of one and maximum of seven). On average, parishes report that 55 percent of seats are filled at these Masses. This is higher than the typical U.S. parish that uses 44 percent of its capacity, on average. The average seating capacity for parishes in District 10 is larger than the typical parish in the United States (644 compared to 523). On average, annual income in District 10 parishes is \$1,520,000 and expenses are \$1,489,000. These budgets are larger than the typical parish in the United States.

In District 12, parishes average three Masses per weekend (a minimum of one and maximum of four). On average, parishes report that 30 percent of seats are filled at these Masses. This is lower than the typical U.S. parish that uses 44 percent of its capacity, on average. The average seating capacity for parishes in District 12 is larger than the typical parish in the United States (650 compared to 523). On average, annual income in District 12 parishes is \$1,640,000 and expenses are \$1,655,000. These budgets are larger than the typical parish in the United States.

In District 13, parishes average three Masses per weekend (a minimum of one and maximum of six). On average, parishes report that 35 percent of seats are filled at these Masses. This is lower than the typical U.S. parish that uses 44 percent of its capacity, on average. The average seating capacity for parishes in District 13 is larger than the typical parish in the United States (586 compared to 523). On average, annual income in District 13 parishes is \$1,004,000 and expenses are \$1,009,000. These budgets are larger than the typical parish in the United States.

In District 14, parishes average three Masses per weekend (a minimum of one and maximum of five). On average, parishes report that 36 percent of seats are filled at these Masses. This is lower than the typical U.S. parish that uses 44 percent of its capacity, on average. The average seating capacity for parishes in District 14 is larger than the typical parish in the United States (684 compared to 523). On average, annual income in District 14 parishes is \$1,776,000

and expenses are \$1,763,000. These budgets are larger than the typical parish in the United States.

In District 15, parishes average three Masses per weekend (a minimum of two and maximum of six). On average, parishes report that 30 percent of seats are filled at these Masses. This is lower than the typical U.S. parish that uses 44 percent of its capacity, on average. The average seating capacity for parishes in District 15 is larger than the typical parish in the United States (781 compared to 523). On average, annual income in District 1 parishes is \$1,157,000 and expenses are \$1,119,000. These budgets are larger than the typical parish in the United States.

In District 16, parishes average three Masses per weekend (a minimum of two and maximum of four). On average, parishes report that 35 percent of seats are filled at these Masses. This is lower than the typical U.S. parish that uses 44 percent of its capacity, on average. The average seating capacity for parishes in District 16 is larger than the typical parish in the United States (770 compared to 523). On average, annual income in District 16 parishes is \$1,346,000 and expenses are \$1,327,000. These budgets are larger than the typical parish in the United States.

In District 1, parishes average 937 registered households and 2,550 registered parishioners. These are lower than the national average of 999 registered households and 2,598 registered parishioners. The average number of most minority races/ethnicities are lower in District 1 than the national average, including African American (6 compared to 97), American Indian (1 compared to 8), and Asian (20 compared to 148) parishioners. The only race/ethnicity that had an average larger in District 1 than the national average are Hispanic parishioners (397 compared to 388).

In District 2, parishes average 769 registered households and 1,711 registered parishioners. These are lower than the national average of 999 registered households and 2,598 registered parishioners. The average number of all minority races/ethnicities are lower in District 2 than the national average, including African American (3 compared to 97), American Indian (1 compared to 8), Hispanic (161 compared to 388), and Asian (7 compared to 148) parishioners.

In District 3, parishes average 659 registered households and 1,658 registered parishioners. These are lower than the national average of 999 registered households and 2,598 registered parishioners. The average number of all minority races/ethnicities are lower in District 3 than the national average, including African American (2 compared to 97), American Indian (1 compared to 8), Hispanic (198 compared to 388), and Asian (6 compared to 148) parishioners.

In District 4, parishes average 1,446 registered households and 4,085 registered parishioners. These are higher than the national average of 999 registered households and 2,598 registered parishioners. The average number of all minority races/ethnicities are lower in District 4 than the national average, including African American (6 compared to 97), American Indian (2 compared to 8), Hispanic (101 compared to 388), and Asian (18 compared to 148) parishioners.

In District 5, parishes average 1,185 registered households and 3,373 registered parishioners. These are higher than the national average of 999 registered households and 2,598 registered parishioners. The average number of all minority races/ethnicities are lower in District 5 than the national average, including African American (3 compared to 97), American Indian (1 compared to 8), Hispanic (15 compared to 388), and Asian (5 compared to 148) parishioners.

In District 6, parishes average 914 registered households and 2,376 registered parishioners. These are lower than the national average of 999 registered households and 2,598 registered parishioners. The average number of all minority races/ethnicities are lower in District 6 than the national average, including African American (3 compared to 97), American Indian (less than 1 compared to 8), Hispanic (14 compared to 388), and Asian (2 compared to 148) parishioners.

In District 7, parishes average 305 registered households and 727 registered parishioners. These are lower than the national average of 999 registered households and 2,598 registered parishioners. The average number of all minority races/ethnicities are lower in District 7 than the national average, including African American (less than 1 compared to 97), American Indian (0 compared to 8), Hispanic (21 compared to 388), and Asian (1 compared to 148) parishioners.

In District 8, parishes average 980 registered households and 2,204 registered parishioners. These are lower than the national average of 999 registered households and 2,598 registered parishioners. The average number of all minority races/ethnicities are lower in District 8 than the national average, including African American (4 compared to 97), American Indian (1 compared to 8), Hispanic (102 compared to 388), and Asian (2 compared to 148) parishioners.

In District 9, parishes average 803 registered households and 1,975 registered parishioners. These are lower than the national average of 999 registered households and 2,598 registered parishioners. The average number of all minority races/ethnicities are lower in District 9 than the national average, including African American (4 compared to 97), American Indian (1 compared to 8), Hispanic (152 compared to 388), and Asian (23 compared to 148) parishioners.

In District 10, parishes average 1,177 registered households and 3,019 registered parishioners. These are higher than the national average of 999 registered households and 2,598 registered parishioners. The average number of all minority races/ethnicities are lower in District 10 than the national average, including African American (3 compared to 97), American Indian (1 compared to 8), Hispanic (12 compared to 388), and Asian (5 compared to 148) parishioners.

In District 12, parishes average 673 registered households and 1,854 registered parishioners. These are lower than the national average of 999 registered households and 2,598 registered parishioners. The average number of all minority races/ethnicities are lower in District 12 than the national average, including African American (28 compared to 97), American Indian (2 compared to 8), Hispanic (23 compared to 388), and Asian (5 compared to 148) parishioners.

In District 13, parishes average 736 registered households and 1,816 registered parishioners. These are lower than the national average of 999 registered households and 2,598

registered parishioners. The average number of most minority races/ethnicities are lower in District 13 than the national average, including African American (6 compared to 97), Hispanic (115 compared to 388), and Asian (74 compared to 148). The only race/ethnicity that had an average larger in District 13 than the national average is American Indian (9 compared to 8) parishioners.

In District 14, parishes average 348 registered households and 2,127 registered parishioners. These are lower than the national average of 999 registered households and 2,598 registered parishioners. Some of the average minority races/ethnicities are lower in District 14 than the national average, including African American (2 compared to 97) and Asian (3 compared to 148) parishioners. The races/ethnicities that had an average larger in District 13 than the national average are Hispanic (1,444 compared to 388) and American Indian (9 compared to 8) parishioners.

In District 15, parishes average 981 registered households and 2,251 registered parishioners. These are lower than the national average of 999 registered households and 2,598 registered parishioners. The average number of all minority races/ethnicities average numbers are lower in District 15 than the national average, including African American (2 compared to 97), American Indian (1 compared to 8), Hispanic (111 compared to 388), and Asian (16 compared to 148) parishioners.

In District 16, parishes average 1,482 registered households and 3,582 registered parishioners. These are higher than the national average of 999 registered households and 2,598 registered parishioners. The average number of all minority races/ethnicities average numbers are lower in District 16 than the national average, including African American (2 compared to 97), American Indian (1 compared to 8), Hispanic (111 compared to 388), and Asian (16 compared to 148) parishioners.

<i>District 16 Average</i>		<b>1,482</b>	<b>3,582</b>	<b>4</b>	<b>3</b>	<b>50</b>	<b>47</b>

On average, the typical parish in the United States has 41 children and infants baptized per year and 24 deaths. This means that there are approximately 2.9 baptisms per death. This indicates that the average parish is growing demographically each year. In addition to baptisms a typical parish celebrates 43 first communions, 33 confirmations, and 10 marriages in the Church.

**Table 14a. Baptisms, Funerals, and Other Sacraments,  
United States in 2013**

<i>Sacraments Celebrated</i>	<b>Average</b>	<b>Median</b>
Children baptized	41	17
Adults baptized	3	1
First Communion	43	20
Confirmations	33	17
Marriages	10	6
Deaths	24	15
Baptisms per Death	2.9	1.3

In District 1, parishes average 30 child baptisms and one adult baptism per year. These figures are below the typical U.S. parish that baptizes 41 children and 3 adults. The average first communion rate for parishes is lower than the national average (34 compared to 43) as well as the confirmation rates (23 compared to 33). On average, there are 5 marriages per parish in District 1, which is lower than the national average of 10. The average deaths per parish is 24 while the average baptism per parish is 1.5, the number of deaths is the same as the national rate, while the number of baptisms per death are lower.

In District 2, parishes average 31 child baptisms and less than one adult baptism per year. These figures are below the typical U.S. parish that baptizes 41 children and 3 adults. The average first communion rate for parishes is lower than the national average (32 compared to 43) as well as the confirmation rates (18 compared to 33). On average, there are 4 marriages per parish in District 2, which is lower than the national average of 10. The average deaths per parish is 27 while the average baptism per parish is 1.9, the number of deaths is higher than the national rate, while the number of baptisms per death are lower.

In District 3, parishes average 26 child baptisms and one adult baptism per year. These figures are below the typical U.S. parish that baptizes 41 children and 3 adults. The average first communion rate for parishes is lower than the national average (27 compared to 43) as well as the confirmation rates (19 compared to 33). On average, there are 6 marriages per parish in District 3, which is lower than the national average of 10. The average deaths per parish is 21 while the average baptism per parish is 1.5, both of these numbers are below the national rate.

In District 4, parishes average 40 child baptisms and less than one adult baptism per year. These figures are below the typical U.S. parish that baptizes 41 children and 3 adults. The average first communion rate for parishes is higher than the national average (50 compared to 43) as well as the confirmation rates (48 compared to 33). On average, there are 9 marriages per

parish in District 4, which is lower than the national average of 10. The average deaths per parish is 35 while the average baptism per parish is 1.2, both the number of deaths and number of baptisms per death are lower than the national average.

In District 5, parishes average 36 child baptisms and one adult baptism per year. These figures are below the typical U.S. parish that baptizes 41 children and 3 adults. The average first communion rate for parishes is higher than the national average (49 compared to 43) as well as the confirmation rates (50 compared to 33). On average, there are 10 marriages per parish in District 5, which is the same as the national average of 10. The average deaths per parish is 19 while the average baptism per parish is 2.0, both the number of deaths and number of baptisms per death are lower than the national average.

In District 6, parishes average 28 child baptisms and one adult baptism per year. These figures are below the typical U.S. parish that baptizes 41 children and 3 adults. The average first communion rate for parishes is lower than the national average (31 compared to 43) as well as the confirmation rates (30 compared to 33). On average, there are 8 marriages per parish in District 6, which is lower than the national average of 10. The average deaths per parish is 28 while the average baptism per parish is 0.8, the number of deaths is higher than the national average while baptisms per death are lower than the national average.

In District 7, parishes average 8 child baptisms and less than one adult baptism per year. These figures are below the typical U.S. parish that baptizes 41 children and 3 adults. The average first communion rate for parishes is lower than the national average (9 compared to 43) as well as the confirmation rates (9 compared to 33). On average, there are 2 marriages per parish in District 7, which is lower than the national average of 10. The average deaths per parish is 29 while the average baptism per parish is 1.2, the number of deaths is higher than the national average while baptisms per death are lower than the national average.

In District 8, parishes average 28 child baptisms and less than one adult baptism per year. These figures are below the typical U.S. parish that baptizes 41 children and 3 adults. The average first communion rate for parishes is lower than the national average (29 compared to 43) as well as the confirmation rates (22 compared to 33). On average, there are 8 marriages per parish in District 8, which is lower than the national average of 10. The average deaths per parish is 29 while the average baptism per parish is 1.0, the number of deaths is higher than the national average while baptisms per death are lower than the national average.

In District 9, parishes average 18 child baptisms and zero adult baptism per year. These figures are below the typical U.S. parish that baptizes 41 children and 3 adults. The average first communion rate for parishes is lower than the national average (24 compared to 43) as well as the confirmation rates (17 compared to 33). On average, there are 7 marriages per parish in District 9, which is lower than the national average of 10. The average deaths per parish is 23 while the average baptism per parish is 1.0, both the number of deaths and baptisms per death are lower than the national average.

In District 10, parishes average 32 child baptisms and one adult baptism per year. These figures are below the typical U.S. parish that baptizes 41 children and 3 adults. The average first communion rate for parishes is lower than the national average (32 compared to 43)

although the confirmation rates are higher (39 compared to 33). On average, there are 7 marriages per parish in District 10, which is lower than the national average of 10. The average deaths per parish is 25 while the average baptism per parish is 1.1, the number of deaths is higher than the national average while baptisms per death are lower than the national average.

In District 12, parishes average 30 child baptisms and less than one adult baptism per year. These figures are below the typical U.S. parish that baptizes 41 children and 3 adults. The average first communion rate for parishes is lower than the national average (20 compared to 43) as well as the confirmation rate (12 compared to 33). On average, there are 4 marriages per parish in District 12, which is lower than the national average of 10. The average deaths per parish is 22 while the average baptism per parish is 1.8, both the number of deaths and baptisms per death are lower than the national average.

In District 13, parishes average 27 child baptisms and two adult baptisms per year. These figures are below the typical U.S. parish that baptizes 41 children and 3 adults. The average first communion rate for parishes is lower than the national average (24 compared to 43) as well as the confirmation rate (17 compared to 33). On average, there are 18 marriages per parish in District 13, which is higher than the national average of 10. The average deaths per parish is 17 while the average baptism per parish is 1.6, both the number of deaths and baptisms per death are lower than the national average.

In District 14, parishes average 88 child baptisms and one adult baptism per year. The average child baptisms are above the national figures of 41 children, while the adult baptisms are below the typical U.S. parish that baptizes of 3 adults. The average first communion rate for parishes is higher than the national average (67 compared to 43) although the confirmation rate is lower (31 compared to 33). On average, there are 9 marriages per parish in District 14, which is lower than the national average of 10. The average deaths per parish is 11 while the average baptism per parish is 10.2, the number of deaths is lower than the national average while baptisms per death are higher than the national average.

In District 15, parishes average 25 child baptisms and less than one adult baptism per year. These figures are below the typical U.S. parish that baptizes 41 children and 3 adults. The average first communion rate for parishes is lower than the national average (31 compared to 43) as well as the confirmation rate (16 compared to 33). On average, there are 6 marriages per parish in District 15, which is lower than the national average of 10. The average deaths per parish is 37 while the average baptism per parish is 0.7, the number of deaths is higher than the national average while baptisms per death are lower than the national average.

In District 16, parishes average 31 child baptisms and two adult baptisms per year. These figures are below the typical U.S. parish that baptizes 41 children and 3 adults. The average first communion rate for parishes is lower than the national average (38 compared to 43) as well as the confirmation rate (29 compared to 33). On average, there are 8 marriages per parish in District 16, which is lower than the national average of 10. The average deaths per parish is 41 while the average baptism per parish is 0.7, the number of deaths is higher than the national average while baptisms per death are lower than the national average.

United States in 2013**

	<b>Average</b>	<b>Median</b>
<i><b>Parishioner Age Groups</b></i>		
Children	546	246
Adults	1,319	791
Seniors	733	385
<i><b>Parish School</b></i>		
K-12 students enrolled	202	150

District 1 has an average of 53 parishioners moving from the parish and 53 newly registered parishioners.<sup>12</sup> The average number of children is lower than the national average (42 compared to 546), the average number of adults is higher (1,340 compared to 1,319), and the average number of seniors is lower (411 compared to 733). The average number of K-12 students enrolled is 151, which is lower than the national average.

District 2 has an average of 17 parishioners moving from the parish and 24 newly registered parishioners.<sup>11</sup> The average number of children is lower than the national average (318 compared to 546), the average number of adults is also lower (809 compared to 1,319), and the average number of seniors is lower (336 compared to 733). The average number of K-12 students enrolled is 126, which is lower than the national average.

District 3 has an average of 29 parishioners moving from the parish and 23 newly registered parishioners.<sup>11</sup> The average number of children is lower than the national average (346 compared to 546), the average number of adults is also lower (748 compared to 1,319), and the average number of seniors is lower (279 compared to 733). The average number of K-12 students enrolled is 179, which is lower than the national average.

District 4 has an average of 64 parishioners moving from the parish and 63 newly registered parishioners.<sup>11</sup> The average number of children is higher than the national average (993 compared to 546), the average number of adults is also higher (2,320 compared to 1,319), although the average number of seniors is lower (679 compared to 733). The average number of K-12 students enrolled is 268, which is higher than the national average.

District 5 has an average of 44 parishioners moving from the parish and 58 newly registered parishioners.<sup>11</sup> The average number of children is higher than the national average (918 compared to 546), the average number of adults is also higher (1,933 compared to 1,319),

<sup>12</sup> There is no comparable national data for these numbers.

although the average number of seniors is lower (475 compared to 733). The average number of K-12 students enrolled is 381, which is higher than the national average.

District 6 has an average of 17 parishioners moving from the parish and 28 newly registered parishioners.<sup>13</sup> The average number of children is higher than the national average (570 compared to 546), the average number of adults is also higher (1,416 compared to 1,319), although the average number of seniors is lower (421 compared to 733). The average number of K-12 students enrolled is 194, which is lower than the national average.

District 7 has an average of 5 parishioners moving from the parish and 5 newly registered parishioners.<sup>12</sup> The average number of children is lower than the national average (151 compared to 546), the average number of adults is also lower (433 compared to 1,319), and the average number of seniors is lower (186 compared to 733). The average number of K-12 students enrolled is 80, which is lower than the national average.

District 8 has an average of 4 parishioners moving from the parish and 1 newly registered parishioner.<sup>12</sup> The average number of children is lower than the national average (495 compared to 546), the average number of adults is also lower (1,221 compared to 1,319), and the average number of seniors is lower (476 compared to 733). The average number of K-12 students enrolled is 176, which is lower than the national average.

District 9 has an average of 14 parishioners moving from the parish and 23 newly registered parishioners.<sup>12</sup> The average number of children is lower than the national average (411 compared to 546), the average number of adults is also lower (1,140 compared to 1,319), and the average number of seniors is lower (392 compared to 733). The average number of K-12 students enrolled is 176, which is lower than the national average.

District 10 has an average of 38 parishioners moving from the parish and 40 newly registered parishioners.<sup>12</sup> The average number of children is higher than the national average (718 compared to 546), the average number of adults is also higher (1,662 compared to 1,319), although the average number of seniors is lower (543 compared to 733). The average number of K-12 students enrolled is 290, which is higher than the national average.

District 12 has an average of 52 parishioners moving from the parish and 31 newly registered parishioners.<sup>12</sup> The average number of children is lower than the national average (312 compared to 546), the average number of adults is also lower (924 compared to 1,319), and the average number of seniors is lower (373 compared to 733). The average number of K-12 students enrolled is 75, which is lower than the national average.

District 13 has an average of 34 parishioners moving from the parish and 42 newly registered parishioners.<sup>12</sup> The average number of children is lower than the national average (414 compared to 546), the average number of adults is also lower (1,074 compared to 1,319), and the average number of seniors is lower (110 compared to 733). The average number of K-12 students enrolled is 110, which is lower than the national average.

## Mass Attendance

Aggregating data from previous tables, parishes in the Archdiocese of Milwaukee report 146,974 Mass attenders per weekend. With a weekend capacity (seats multiplied by Masses) of 428,301 this means that 34 percent of the Archdiocese's capacity is used on a typical weekend.<sup>15</sup>

This level of Mass attendance represents 34 percent of registered parishioners reported by parishes and 25 percent of the parish-affiliated Catholic population. This also represents 20 percent of the self-identified Catholic population of the Archdiocese of Milwaukee. This level of Mass attendance on a typical weekend is similar to CARA's national estimates of Mass attendance. Thus, for its population the Archdiocese has average levels of Mass attendance.

CARA estimates that there are 127,200 Catholics in the Archdiocese that are not registered with a parish but are affiliated with one attending Mass with some frequency and participating in some aspects of parish life.<sup>16</sup> Further, there are approximately 147,300 self-identified Catholics in the Archdiocese that are not registered nor affiliated with a parish.

<sup>15</sup> CARA's national surveys indicate that about 68 percent of Catholics attend Mass at Christmas and Easter and about 45 percent on Ash Wednesday. On a typical weekend, about 23 percent attend Mass. Capacity used is relative to the Church calendar as Mass attendance increases on feast days and during Advent and Lent.

<sup>16</sup> CARA's national surveys indicate the non-registered but parish affiliated Catholics are disproportionately young (i.e., under age 35) and self-identify as Hispanic or Latino.
